CC Sequences AAB72246 - AAB72275 represent peptides derived from colostrinin,  
 CC a proline rich polypeptide aggregate contained in colostrum. The  
 CC peptides have immune response modulatory activity, and are capable of  
 CC inducing cytokines. Colostrinin and its derived peptides are useful for  
 CC inducing cytokine production, for modulating an immunological response  
 CC and for inducing blood cell proliferation. The peptides are useful in the  
 CC treatment of disorders of the central nervous system, neurological  
 CC disorders, mental disorders, dementia, neurodegenerative diseases,  
 CC Alzheimer's disease, motor neurone disease, psychosis, neurosis, chronic  
 CC disorders of the immune system, bacterial and viral infections and  
 CC acquired immunological deficiencies.

XX Modulating oxidative stress level in a cell, involves contacting the  
 PT cell with an oxidative stress regulator selected from colostrinin, its  
 PT constituent peptide, analog or their combinations .  
 PT  
 PS Claim 6; Page 25; 48pp; English.

CC The present invention relates to a method for modulating the oxidative  
 CC stress level in a cell or a patient, comprising contacting the cell with,  
 CC or administering to the patient, an oxidative stress regulator selected  
 CC from colostrinin, or its constituent peptide (e.g. the present peptide),  
 CC to change the level of an oxidising species in the cell. The method can  
 CC be used to treat oxidative damage to skin, by decreasing or preventing an  
 CC increase in the level of damage to a biomolecule of the patient.

XX PT Peptides having an N-terminal amino acid sequence isolated from

CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidising species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

XX Modulation of blood cell proliferation in a patient involves use of  
 PT blood cell regulator selected from colostrinin, its constituent peptide  
 PT and/or analogue

XX Claim 1; Page 34; 54pp; English.

XX The present sequence is that of a colostrinin constituent peptide  
 CC that is preferred for use as an immunological regulator and as a  
 CC blood cell regulator in claimed methods of the invention. It is  
 CC classified as having a beta-casein homologue precursor. Methods  
 CC are claimed for: inducing a cytokine in a cell by contact with an  
 CC immunological regulator, where the cell is present in a cell  
 CC culture, a tissue, an organ or an organism, and the cell is  
 CC mammalian, including human; modulating an immune response in a cell  
 CC by contact with the immunological regulator under conditions

CC effective to induce a cytokine; modulating an immune response in a  
 CC patient by administering an immunological regulator under conditions  
 CC effective to induce a cytokine, where the immunological regulator  
 CC is administered topically or as part of a dietary supplement, and  
 CC where the immune response is specific or non specific; an interferon  
 CC response or an antibody response; modulating blood cell proliferation  
 CC by contacting blood cells with a blood cell regulator, where the  
 CC blood cells are present in a cell culture or an organism, are  
 CC mammalian or human, and where the blood cells are increased in  
 CC number or differentiated; and a method for modulating blood cell  
 CC proliferation in a patent. A claimed cytokine-inducing composition  
 CC comprises a pharmaceutical carrier and an active agent such as the  
 CC present peptide. Cytokines induced by this peptide in human  
 CC leucocyte cultures include interferon-gamma, tumour necrosis  
 CC factor-alpha, interleukin-6 and interleukin-10. It was one of the  
 CC best overall inducers in almost all cytokine and blood cell  
 CC proliferation experiments conducted.

XX Promoting cell differentiation in a patient involves use of blood cell  
 PT regulator selected from colostrinin, its constituent peptide and/or  
 PT analog

XX Claim 7; Page 21; 37pp; English.

XX The invention comprises a method for promoting cell differentiation (e.g.  
 CC neural cell differentiation). The method involves contacting cells with a  
 CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
 CC cells in morphology to form neural cells. Colostrinin is a proline-rich

CC polypeptide aggregate that is present in colostrum. The method of the  
CC invention is useful for promoting the differentiation of cells and for  
CC treating damaged neural cells in a patient. The present amino acid  
CC sequence represents a specifically claimed colostrinin peptide used in  
CC the method of the invention.

XX PT Screening, diagnosis or prognosis of vascular dementia (VD), useful for  
PT determining stage of VD and monitoring the effect of VD therapy,  
PT comprises analysing body fluid by 2-dimensional electrophoresis for  
PT features correlated with VD -  
XX Claim 6; Page 34; 151pp; English.

CC The invention relates to screening, diagnosis or prognosis of Vascular  
CC Dementia (VD) in a subject comprising analysing body fluid from the  
CC subject by 2-dimensional (2-D) electrophoresis to generate a 2-D array of  
CC features containing at least one chosen feature whose relative abundance  
CC correlates with the presence, absence, stage or severity of VD or  
CC predicts the onset or course of VD, especially detecting in a sample of  
CC cerebrospinal fluid (CSF) from the subject one of 223 VD-associated  
CC protein isoforms (VPIs) (AAB55801-AAB56295) as fully defined in the  
CC specification. Detecting VD-associated features and VPI is useful for the  
CC screening, diagnosis or prognosis of VD, for determining the stage or  
CC severity of VD, for identifying a subject at risk of VD or for  
CC monitoring the effect of therapy administered to a subject having VD.  
CC Nucleic acids encoding a VPI or inhibiting the function of a VPI are  
CC useful for the treatment of VD and for gene therapy.

XX Screening for Alzheimer's disease in a mammal, by making
PT two-dimensional array of a feature whose relative abundance correlates
PT with disease, and comparing with abundance of the feature in samples of
PT healthy persons -
XX
XX Example; Page 25; 162pp; English.
XX
XX The invention relates to methods for the screening, diagnosis and
CC prognosis of Alzheimer's disease. The methods involve the detection
CC of Alzheimer's Disease-Associated Features (AFs) and Alzheimer's
CC Disease-Associated Protein Isoforms (APIs) in cerebrospinal fluid,
CC serum or plasma. The abundance of the AFs and APIs is then
CC normalised to an Expression Reference Protein Isoform (ERPI) in
CC order to determine whether a patient is suffering from, or has
CC a predisposition to, Alzheimer's Disease. The relative abundance of
CC the AFs and APIs correlates with the severity of Alzheimer's Disease.
CC The present sequence is a peptide produced from an API by proteolysis.

 New schizophrenia associated protein isoforms and encoding nucleic acid  
 molecules, useful for treatment, diagnosis and prognosis of  
 schizophrenia and screening for potential drugs for treatment and new  
 drug targets -  
 Disclosure; Page 31; 148pp; English.  
 The sequence represents a schizophrenia-associated protein isoform (SPI).  
 These protein isoforms, e.g. SPI-206, SPI-238 and SPI-240 are detectable  
 in cerebrospinal fluid, serum or plasma and are useful markers of  
 schizophrenia. The sequences can be used for treatment and diagnosis of  
 schizophrenia, screening, prognosis, monitoring the results of therapy,  
 identifying patients most likely to respond to a particular therapy and  
 identification of new targets for drug treatment. SPI DNA is useful as a  
 nucleic acid probe to detect the presence of nucleic acids or SPIs.

 XX Preparation for diagnosing or treating bipolar affected disorder (BAD)  
 PT or unipolar depression, or for screening for modulators, comprises a  
 PT BAD-associated protein isoform -  
 XX Claim 8; Page 31; 163pp; English.  
 XX The invention relates to a preparation comprising an isolated Bipolar  
 CC Affected Disorder (BAD)-Associated Protein Isoform (DPIs). The DPI's are  
 CC used to screen, diagnose or prognosis of BAD or unipolar depression.  
 CC determine the stage or severity of BAD or unipolar depression, identify a  
 CC subject at risk of developing BAD or unipolar depression, or monitor the  
 CC effect of therapy in a subject. They are also used to screen for or  
 CC identify agents that interact with a DPI. These agents, antibodies  
 CC against the DPIs, and nucleic acids encoding the DPIs are used to treat  
 CC or prevent BAD or unipolar depression. Diseases that can be treated are  
 CC attention deficient disorder, a schizoaffective disorder, a bipolar or a  
 CC unipolar affective disorder. The DPIs are used in proteomics. The  
 CC proteomic approach of using DPIs for screening, diagnosis or prognosis of  
 CC BAD or unipolar depression overcomes the problems of using gene  
 CC expression analysis, such as not being able to obtain central nervous  
 CC system (CNS) tissue from a living patient under normal circumstances.  
 CC The present sequence is a DIP decreased in the CSF (cerebro-spinal  
 CC fluid) of subjects having BAD.

XX Diagnosing and monitoring Schizophrenia by detecting the presence of  
 PT Schizophrenia Associated Features and Schizophrenia Associated Protein  
 PT Isoforms in samples of cerebrospinal fluid -  
 XX

PS Claim 6; Page 31; 160pp; English.

XX The invention relates to methods and compositions for screening,  
 CC diagnosis and prognosis of Schizophrenia. The method involves detecting  
 CC the presence of Schizophrenia (SCH) Associated Features (SfEs) and SCH  
 CC Associated Protein Isoforms (SPIs) in samples, e.g. by electrophoresis,  
 CC immunoassay or hybridisation assay, for diagnosing and monitoring SCH,  
 CC studying the effectiveness of treatments and for identifying potential

CC therapeutic agents. The method is used for (1) screening or diagnosis of  
 CC SCH and the relative abundance of at least 1 chosen feature correlates  
 CC with the presence or absence of SCH; and (2) monitoring the effect of  
 CC therapy administered to a subject with SCH and the relative abundance of  
 CC at least 1 chosen feature which correlates with the severity of SCH.  
 CC The expression and activity of the SPS, SPIS and related molecules  
 CC (e.g. secondary messengers) are studied to diagnose SCH, monitor the  
 CC progress of the disorder and the effectiveness of treatment and as  
 CC targets to identify and produce potential therapeutic agents for the  
 CC treatment of SCH. The paucity of detectable neurologic defects  
 CC distinguishes neuropsychiatric disorders such as SCH from neurological  
 CC disorders, where manifestations of anatomical and biochemical changes  
 CC have been identified in many cases. Consequently the identification and  
 CC characterisation of cellular and/or molecular causative defects and  
 CC neuropathies are necessary for improved treatment of neuropsychiatric  
 CC disorders. AAU15114-AAU15762 represent the amino acid sequences of  
 CC schizophrenia-associated isoforms used in the method of the invention.

XX Screening or diagnosing multiple sclerosis (MS), useful for e.g.  
 PT determining the stage or severity of MS, comprises detecting the  
 PT presence of MS-associated features or protein isoforms by 2-dimensional  
 PT electrophoresis -

XX Disclosure; Page 20; 128pp; English.

XX This invention relates to a novel method for screening or diagnosing  
 CC multiple sclerosis (MS) in a subject to determine the stage or severity  
 CC of MS, to identify a subject at risk of developing MS or to monitor the  
 CC effect of a therapy administered. The method comprises analysing a  
 CC sample body fluid from the subject by two-dimensional electrophoresis  
 CC and detecting the presence of multiple sclerosis-associated features

CC (MSFs), or multiple sclerosis-associated protein isoforms (MSPIs).  
 CC The MSFs of the invention correspond to spots identified on a 2D gel  
 CC these proteins may have antiinflammatory or neuroprotective activity.  
 CC The methods of the invention and the compositions are useful for  
 CC clinical screening, diagnosis and treatment of MS, for monitoring the  
 CC effectiveness of MS treatment, for selecting participants in clinical  
 CC trials, for identifying patients most likely to respond to a particular  
 CC therapeutic treatment and for screening and developing drugs for  
 CC treatment of MS. Agents that modulate the expression or activity of an  
 CC MSPI are useful for treating MS, for preventing or delaying the onset or  
 CC development of MS, to prevent or delay the progression of MS, or to  
 CC ameliorate the symptoms MS. Nucleic acids comprising a sequence encoding  
 CC an MSPI, MSPI-related polypeptide, or their fragments are useful for  
 CC promoting MSPI function by gene therapy. The present sequence represents  
 CC a human multiple sclerosis associated feature tryptic digest  
 CC peptide of the invention.

XX Screening, diagnosing or determining the stage or severity of breast  
 PT cancer, comprises analyzing and quantitatively detecting Breast  
 PT Cancer-Associated Features or Breast Cancer-Associated Protein Isoforms  
 PT in a biological sample -

XX Disclosure; Page 18; 88pp; English.

XX The present invention describes a method for screening, diagnosing or  
 CC determining the stage or severity of breast cancer, identifying a subject  
 CC at risk of developing breast cancer, or monitoring the effect of therapy  
 CC administered to a subject with breast cancer, by generating a

two-dimensional array of features comprising breast cancer-associated features (BPs), or quantitatively detecting breast cancer-associated protein isoforms (BPs). Also described: (1) an antibody capable of immunospecifically binding to one of the BPs; (2) a pharmaceutical compositions comprising: (a) a BPI, or a nucleic acid encoding a BPI, and a carrier; or (b) the antibody of (1), or a fragment or derivative of the antibody, and a carrier; (3) screening for agents that interact with one or more BPIs, BPI fragments, polypeptides related to BPIs, or BPI-fusion proteins; (4) screening for or identifying agents that modulate the expression or activity of one or more BPIs, a BPI fragment, a BPI-related polypeptide, or BPI-fusion proteins; and (5) treating or preventing breast cancer. BPIs have cytostatic activity and can be used in gene therapy. Methods and kits comprising antibodies or the BPIs from the present invention can be used for screening, diagnosing or determining the stage or severity of breast cancer, identifying a subject at risk of developing breast cancer, or monitoring the effect of therapy administered to a subject with breast cancer. The antibodies, BPIs, nucleic acids encoding the BPIs, or an agent that modulates the activity of one or more BPIs are useful for treating or preventing breast cancer. ABP57104 to ABP57250 represent breast cancer associated tryptic digest peptides, which are used in the exemplification of the present invention.

XX Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases, PT oncogenes and histones, useful for diagnosing and treating, e.g. PT cancer, autoimmune diseases and infections -

XX

PS Disclosure; Page 3722; 4143pp; English.  
 XX The present invention relates to oligonucleotides (see AAL26793-AAL34659) encoding polymorphic variants of proteins related to amylases, amyloid proteins, angiotensin, apoptosis related proteins, cadherin, cyclin, polymerase, oncogene, histone, kinase, colony stimulating factors, complement related proteins, cytochromes, kinesins, cytokines, interferons, interleukins, G-protein coupled receptors and thioesterases. The present sequence is a peptide encoded by one such oligonucleotide. The oligonucleotides and the peptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of the proteins listed above. Disorders that may be prevented, diagnosed and/or treated include multifactorial diseases with a genetic component, such as autoimmune diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes, systemic lupus erythematosus and Grave's disease), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, leukaemia), diseases of the nervous system and an infection of pathogenic organisms.

XX New peptides capable of inhibiting angiotensin converting enzyme for use in pharmaceutical compositions, in health foods and as food additives -

XX Claim 1; Page 2; 39pp; Japanese.

XX The present invention relates to novel peptides having angiotensin converting enzyme (ACE) inhibitory activity. Also described are methods for preparing products having ACE inhibitory activity, a pharmaceutical composition for use in the inhibition of ACE, and a health food or a food additive for use in the inhibition of ACE. The peptides of the invention are useful as ACE inhibitors (ACEI). They are useful in pharmaceutical products and health foods, and as food additives. Such compositions may be used for lowering blood pressure and treating hypertension. The manufacturing cost of the peptides of the

CC invention is considerably less than prior art as the peptide can be  
 CC produced from waste materials. Also the values of chicken essence  
 CC by-products can be improved. The present peptide derived from chicken  
 CC bone is useful as an ACE inhibitor.

DR Selecting target cells by reacting specific antibody to surface  
 PT antigen - then disrupting the complex formed with peptide displacer,  
 PT partic. for selecting CD34 cells for reconstitution of immune system  
 PT after anticancer treatment

XX Claim 25; Page 156; 170pp; English.

XX AAR90413-R30468 represent antibody displacing peptides. These sequences  
 CC displace the monoclonal antibody designated 561. These sequences can be  
 CC used in a method to select target cells from a heterogeneous cell  
 CC suspension. In the suspension, there is at least one complex of a cell  
 CC separation system, linked to a primary antibody (Ab) which is bound to  
 CC the cell surface antigen (Ag). The complex is separated from the rest  
 CC of the suspension, and contacted with a peptide (such as this sequence)  
 CC that binds to the Ab, displacing it from the Ag and releasing the cell.  
 CC These sequences can be identified by bioassaying random peptide display  
 CC libraries with the Ab, by analysis of potential antigenic peaks of the  
 CC cell surface antigen, or by analysis of the complementarity determining  
 CC regions of the Ab. These sequences can also be used in a method for  
 CC determining the number of specific cells in a composition. The methods  
 CC can be used for positive selection of CD34 haematopoietic cells, and  
 CC removal of undesired tumour cells or lymphocytes from the selected  
 CC cells. The pure CD34 cells are reinfused into a cancer patient after high  
 CC dose therapy to reconstitute the immune system. Cancer cells can also

CC be isolated to determine their chemotherapeutic susceptibility, or for  
 CC the production of patient-specific vaccines or antibodies. These  
 CC sequences allow for the recovery of cells from solid supports, in high  
 CC yield, without enzymatic cleavage. They are relatively inexpensive and  
 CC safe, and leave cell surface proteins intact.

DR Short peptides useful for displacing antibodies from cell surface  
 PT antigens.

XX Claim 7; Column 145; 81pp; English.

XX The present invention describes peptides of 4-17 amino acids which  
 CC displace either the anti-CD34 monoclonal antibody designated 561, the  
 CC anti-CD34 mouse monoclonal antibody produced by the hybridoma ATCC  
 CC HB-11646 (designated 9069), the anti-CD34 antibody produced by  
 CC hybridoma ATCC HB-11885 (9079), or the anti-human breast cancer  
 CC antibody produced by hybridoma ATCC HB-11894 (9187), from a cell  
 CC surface antigen on a target cell. The peptides are useful for  
 CC displacing antibodies bound to cell surfaces to release cells that  
 CC have been positively selected by antibody-mediated binding to beads  
 CC or other solid support. AAV5107 to AAV5319 represent peptides used in  
 CC the exemplification of the present invention.

DR
XX Non-enzymatic method for the positive selection of target cells from a
PT heterogeneous cell suspension, useful for selecting human breast cancer
PT cells from a patient's blood or bone marrow -
PT
XX Example 13; Column 19; 82pp; English.
PS
XX This sequence represents a human haematopoietic CD34+ cell binding
CC peptide, and was used to test the method of the invention. The method is
CC a non-enzymatic method for the positive selection of one or more target
CC cells from a heterogeneous cell suspension, by using specific peptides
CC which effect the displacement and release of a specific target cell
CC from a specific monoclonal antibody. The method is useful for positive
CC selection and specific release of target human haematopoietic
CC stem/progenitor cells bound by the monoclonal anti-CD34 antibodies and
CC the antibody 561. The method is also useful for positive selection and
CC specific release of target human breast cancer cells, bound by the
CC monoclonal anti-breast cancer antibody 9187, from a patient's blood or
CC bone marrow. Identification of peptide epitopes for antibodies which
CC recognise cell surface determinants also allows construction of
CC diagnostic cell based assays. The peptide mediated release is enzyme free
CC and thus leaves the cell surface proteins intact. Moreover, peptide
CC mediated release leaves the target cell free of bound antibody or
CC antibody fragments. The method also produces a high yield of functional
CC target cells and is relatively inexpensive to carry out.

XX Novel peptides inhibiting binding of vascular endothelial growth factor
PT (VEGF) to kinase domain receptor, or inhibiting binding of anti-VEGF
PT antibody to VEGF, useful for treating diabetic retinopathy and
PT psoriasis
XX
XX Claim 15; Page 19; 55pp; English.
XX
CC AAG79260-73 represent peptides which affect vascular endothelial growth
CC factor (VEGF) binding to antibodies or the kinase domain receptor (KDR).
CC Peptides AAG79260-66 were selected by their ability to bind to an
CC anti-VEGF antibody, and peptides AAG79267-73 were selected for their
CC ability to bind to CHO cells expressing a KDR which binds VEGF. The
CC peptides inhibit the binding of VEGF to KDR, and inhibit binding of
CC anti-VEGF antibody to VEGF. The peptides are useful for inhibiting
CC angiogenesis and for treating diseases including cancer, diabetic
CC retinopathy, psoriasis, hemangioblastoma, and Kaposi's sarcoma.

XX Novel vaccine for alleviating or preventing autoimmune disorders
PT induced Epstein-Barr virus (EBV) infection e.g. systemic lupus
PT erythematosus, juvenile onset diabetes mellitus, comprises EBV virus or
PT its component
XX
XX Example 10; Page 56; 114pp; English.
XX
CC The present invention relates to a vaccine for alleviating or preventing
CC autoimmune disorders induced by infection with Epstein-Barr virus (EBV),
CC comprising EBV or its component in a carrier. The vaccine is useful for
CC preventing or alleviating autoimmune disorders induced by EBV, e.g.
CC systemic lupus erythematosus (SLE), Sjogren's syndrome, juvenile onset
CC diabetes mellitus, rheumatoid arthritis, Wegener's granulomatosis,
CC inflammatory bowel disease, polymyositis, dermatomyositis, multiple
CC endocrine failure, Schmidt's syndrome, autoimmune uveitis, Addison's
CC disease, adenitis, primary biliary cirrhosis, Graves' disease,
CC thyroiditis, Hashimoto's thyroiditis, autoimmune thyroid disease,
CC pernicious and haemolytic anaemia, lupoid hepatitis, demyelinating
CC disease, multiple sclerosis, subacute cutaneous lupus erythematosus,
CC hypoparathyroidism, Dressler's syndrome, myasthenia gravis, autoimmune
CC idiopathic thrombocytopenic purpura, autoimmune pemphigus vulgaris,
CC pemphigus, bullous pemphigoid, dermatitis herpetiformis, alopecia
CC areata, autoimmune cystitis, pemphigoid, scleroderma, progressive
CC systemic sclerosis, CREST syndrome (calcinosis, Raynaud's oesophageal
CC dysmotility, sclerodactyly and telangiectasia), adult onset diabetes
CC mellitus (type II diabetes), male or female autoimmune infertility,
CC ankylosing spondylitis, ulcerative colitis, Crohn's disease, mixed
CC connective tissue disease, polyarthritis nodosa, systemic necrotising
CC vasculitis, glomerulonephritis, atopic dermatitis, atopic rhinitis,
CC Goodpasture's syndrome, Chagas' disease, sarcoidosis, rheumatic fever,
CC asthma, recurrent abortion, anti-phospholipid syndrome, farmer's lung,
CC erythema multiforme, postcardotomy syndrome, Cushing's syndrome,
CC autoimmune chronic active hepatitis, bird-fancier's lung, allergic
CC encephalomyelitis, toxic necrodermal lysis, alopecia, Alport's syndrome,
CC allergic alveolitis, fibrosing alveolitis, interstitial lung disease,
CC erythema nodosum, pyoderma gangrenosum, transfusion reaction, chronic
CC fatigue syndrome, fibromyalgia, Takayasu's arteritis, Kawasaki's disease,
CC polymyalgia rheumatica, temporal arteritis, giant cell arteritis, dengue,
CC Sampter's syndrome (triaditis, nasal polyps, eosinophilia) and Behcet's
CC disease, Caplan's syndrome, encephalomyositis, erythema elevatum et
CC diutinum, psoriasis, erythroblastosis foetalis, Shulman's syndrome, IgA
CC nephropathy, Felty's syndrome, fascitis with eosinophilia, filariasis,
CC chronic cyclitis, heterochromic cyclitis, Fuch's cyclitis, Hodgkin's and
CC non-Hodgkin's lymphoma, cardiomyopathy, Henoch-Schonlein purpura, post
CC vaccination syndromes, renal cell carcinoma, Eaton-Lambert syndrome or
CC relapsing polychondritis. The present sequence is Bacteriophage Type I
CC peptide used in the invention.

 XX Screening for an agent that delays the cell cycle by combining a  
 PT purified Bxa protein moiety and an test agent with guanosine  
 PT triphosphate, and measuring resulting guanosine diphosphate -  
 XX Examples; Column 28; 58pp; English.  
 XX The present invention relates to screening for an agent that delays  
 CC the cell cycle involving combining a purified Bxa protein moiety and  
 CC at least one test agent with GTP, measuring resulting GDP and  
 CC comparing this to a control. The method is useful for detecting agents  
 CC that delay the cell cycle and for screening for anti-cancer agents.  
 CC Agents identified by the method may be used for reducing or stopping  
 CC the growth of infectious organisms and thus decreasing or eliminating  
 CC infection. The present sequence is a protein of the invention.

 PA Campbell KP, Matsumura K;  
 XX WPI; 1994-118616/14.  
 XX Diagnosis of autosomal muscular dystrophy - by determining  
 PT binding of an antibody to a dystrophin-associated protein to  
 PT experimental muscle tissue  
 XX Claim 23; Page 70; 82pp; English.  
 XX Dystrophin is a large molecular wt. protein product of the  
 CC defective gene responsible for Duchenne's muscular dystrophy.  
 CC It exists as a component of a large oligomeric complex - the  
 CC dystrophin glycoprotein complex. Other components comprise  
 CC glycoproteins of 156 kDa, 50 kDa, 43 kDa, 35 kDa, and a triplet of  
 CC proteins of 59 kDa. When skeletal muscle biopsy samples of  
 CC patients with severe childhood autosomal recessive muscular  
 CC dystrophy (SCARMD) were compared with normal muscle, immunostaining  
 CC for the 50 kDa DAP was greatly reduced in the sarcolemma of all  
 CC the muscle fibres of the SCARMD patients. The 50 kDa species of  
 CC the dystrophin glycoprotein complex was separated from the other  
 CC components and subjected to trypsin digestion. The digestion  
 CC products were sequenced and are given in AAR50241-45. AAR50241  
 CC (claimed) was chemically synthesised and attached to a solid  
 CC support to generate an affinity matrix. Polyclonal antibodies  
 CC specifically reactive with this peptide were isolated using  
 CC the affinity purification method. Peptides identified in this  
 CC manner can be used to immunise animals to generate antibodies  
 CC specifically reactive with a single epitope of the 50 kDa  
 CC protein.

CC This is an immunogenic epitope of 50 kDa dystrophin-associated protein.
CC This immunogenic peptide can stimulate the production of antibodies which
CC bind specifically to the 50 kDa dystrophin-associated protein. The
CC molecular weight of the protein can be determined by electrophoretic
CC separation under denaturing conditions, and transferring to a solid
CC support and staining with wheat germ agglutinin. The peptide is useful
CC for producing polyclonal and monoclonal antibodies that bind specifically
CC to the 50 kDa dystrophin-associated protein and can be used in the
CC diagnosis of some forms of muscular dystrophy.

XX Obtaining a phage particle, useful for obtaining human antibodies
PT against known and novel surface antigens, by incubating a phage library
PT with target cells to allow binding of the antibody fragment to the
PT antigen.
XX Example 6; Column 6; 6pp; English.
XX The invention relates to a method of obtaining a phage particle
CC which has an antibody fragment directed against an antigen associated
CC with the surface of target cells in a heterogeneous cell population.
CC The method involves incubating a library of phage particles with the
CC target cells to allow binding of the antibody fragment expressed on
CC the surface of the phage particles to the antigen associated with
CC the target cells. The method is useful for obtaining human antibodies
CC against known and novel surface antigens in their native configuration,
CC expressed on phenotypically defined subpopulations of cells.
CC The present sequence is complementarity-determining region 3' (CDR3)
CC of monoclonal phage antibodies (Mophabs) used in the exemplification
CC of the invention.

XX Obtaining phage having antibody specific for cell surface antigen of

PT target cells in heterogeneous cell population, by incubating phage

PT antibody library with target cells, and separating phage particles

PT bound target cells

XX Example 6; Page 4; 5pp; English.

XX The invention discloses a method for obtaining a phage comprising an

CC antibody, or its fragment, directed against antigens associated with a

CC target cells surface in a heterogeneous cell population. The method

CC comprises providing a library of antibodies, or their fragments,

CC expressed on the surface of phage particles, incubating the phage

CC antibody library with the target cells, separating the target cells and

CC phage particles associated with them from the phage particles not

CC associated with the target cells and then recovering the phage particles.

CC Also disclosed is a cell-type specific phage antibody library and an

CC antibody, or antibody fragment, obtained using the method. The method is

CC useful for obtaining a selection of phage antibodies (Phabs) and

CC monoclonal phage antibodies (Mophabs). The method is also useful for

CC detecting known and novel structures on various populations of blood and

CC foetal bone marrow cells. The sequence presented is an example of the

CC partly randomised human complementarity determining region 3 (CDR3) used  
 CC in the construction of the antibodies.

PT  disorders by disrupting interactions of the SH (Src homology) 2 and SH3
PT  motifs of Src family kinase proteins -
XX
XX  Claim 3; Page 34; 40pp; English.
XX
XX  The present sequence is a synthetic peptide which has a high affinity for
CC  the src homology 3 (SH3) domain of protein kinases. Protein kinases are
CC  involved in signal transduction pathways, and this peptide can be used to
CC  inhibit these, by disrupting protein-protein interactions, in the
CC  treatment of cancer, particularly hepatocellular carcinoma, cervical
CC  cancer, colon adenocarcinoma and fibrosarcoma, and immune
CC  suppression-associated diseases.

XX
XX  New conjugates of a peptide coupled to a lipophilic moiety - useful
PT  in the treatment of neurodegenerative diseases and sexual
PT  dysfunctions.
XX
XX  Claim 6; Page 40; 77pp; English.
XX
XX  The present sequence represents a specifically claimed example of a
CC  peptide derived from a fragment of vasoactive intestinal peptide (VIP),
CC  coupled to a lipophilic moiety. The conjugates are useful in treatment of
CC  neurodegenerative diseases, particularly Alzheimer's disease, Down
CC  syndrome, decline in motor or cognitive function due to ischaemia,
CC  stroke, hereditary disease of the central and peripheral nervous system,
CC  decline in motor or cognitive function due to injury of the central or
CC  peripheral nervous system or neuronal disorder associated with blood
CC  circulation and neuronal survival. The compositions are suitable for
CC  nasal administration, particularly as a nasal spray. Some of the
CC  conjugates are also useful in treatment of sexual dysfunctions,
CC  particularly male impotence. The compositions are adapted for transdermal
CC  application, the carrier being 1-glycerol monocaprylate.

 DR  
 XX Computer- based method for identifying invariant peptide motifs which  
 PT are useful as drug targets, especially for broad spectrum  
 PT antibacterials, comprises comparing sequences between species -  
 XX  
 PS Claim 4; Page 21; 29pp; English.  
 XX  
 CC The invention relates to a computer- based method for identifying  
 CC invariant peptide motifs comprising the genome-wise protein sequence  
 CC comparison of several organisms. An overlapping peptide library is  
 CC constructed from all the protein sequences of selected organisms  
 CC available in the database and sorting the peptides, of length N,  
 CC alphabetically according to the one-letter amino acid code. Common  
 CC peptide sequences are matched, located in their original proteins and  
 CC labeled by origin and location. The common sequences are then joined to  
 CC produce long chains of invariant sequences, and their secondary  
 CC structures annotated from a crystal structure database  
 CC Sequences that are not commonly conserved within the genomes of  
 CC pathogenic and non-pathogenic strains are selected and the identified  
 CC motifs are validated as potential targets by searching for them in the  
 CC host genome and rejecting any that are present in the host genome.  
 CC The method is used to identify invariant peptide motifs and potential  
 CC drug targets, particularly in screening for drugs with broad spectrum  
 CC antibacterial activity, also for specific diagnosis of infection. The  
 CC method can also be used to predict toxicity and alternative targets, and  
 CC in a modification, to assign function to proteins of no known function.  
 CC The method requires no a priori assumptions, and so avoids bias, and  
 CC allows rapid and simultaneous genome-wise comparison of many different  
 CC protein sequences. The motifs are identified simply and accurately  
 CC without complicated mathematical calculations. The present sequence  
 CC is a bacterial invariant protein motif of the invention.

 XX Modifying a polypeptide, useful for designing or engineering less  
 PT immunogenic molecules intended for use in therapy, by modifying an  
 PT immunodominant epitope identified using an antibodies from a naive  
 PT human or animal population -  
 XX  
 XX Example 3; Page 48; 78pp; English.  
 PS  
 XX The invention describes a method of modifying a polypeptide comprising  
 CC modifying an immunodominant epitope that is identified using an antibody  
 CC or population of antibodies obtained from a naive human or animal  
 CC population. The method is useful for designing and engineering less  
 CC immunogenic molecules. In particular, the method is useful reducing the  
 CC immune response to a polypeptide, while still retaining a substantial  
 CC therapeutic activity of such polypeptide. The modified polypeptide is  
 CC useful in treating cancer and/or patient undergoing chemotherapy or  
 CC radiation treatment, in treating viral infections, metabolic disorders  
 CC or growth disorders. Specifically, the recombinant human thrombopoietin  
 CC is useful for treating thrombocytopenia. The modified polypeptide may be  
 CC used therapeutically in a variety of animal species including human,  
 CC primate, cattle, pigs, poultry or mice. This sequence represents a  
 CC synthetic thrombopoietin (TPO) c-terminal epitope peptide used to create  
 CC antibodies against TPO.

 CC AAB51927 represent alternative polypeptides encoded by the genes, and  
 CC amino acid sequences with which they share homology. The genes and  
 CC proteins have activities dependent on the tissues and cells in which they  
 CC are expressed. Examples of their activities include immunosuppressive;  
 CC antarthritic; antirheumatic; antiproliferative; cytostatic; cardiac;  
 CC vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial;  
 CC virucide; fungicide; opthalmological; and vulnerary. The secreted  
 CC proteins, polynucleotides, antagonists and agonists may be useful in  
 CC treating, preventing and/or diagnosing diseases and disorders such as  
 CC autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative  
 CC disorders e.g. neoplasms of the breast or liver, cardiovascular disorders  
 CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia,  
 CC angioneuroma, nervous system disorders e.g. Alzheimer's disease,  
 CC infections caused by bacteria, viruses and fungi and ocular disorders  
 CC e.g. corneal infection. The polypeptides can also be used to aid wound  
 CC healing and epithelial cell proliferation, to prevent skin aging due to  
 CC sunburn, to maintain organs before transplantation, for supporting cell  
 CC culture of primary tissues, to regenerate tissues and in chemotaxis. The  
 CC polypeptides can also be used as a food additive or preservative to  
 CC increase or decrease storage capabilities, fat content, lipid, protein,  
 CC carbohydrate, vitamins, minerals, cofactors and other nutritional  
 CC components. Oligonucleotides AAC93470 - AAC93478 and peptide AAB51826 are  
 CC used in the isolation and characterisation of the proteins and  
 CC polynucleotides of the invention.

 DR Screening ligand library comprises allowing binding of ligand with  
 XX anti-target, contacting unbound ligands with selected target to form  
 PT target-bound ligand complex and identifying target bound ligands on the  
 PT complex -  
 XX  
 PS Claim 22; Page 34; 51pp; English.  
 XX  
 CC The present invention describes a method for screening a ligand library  
 CC (LL). The method comprises: (a) contacting the LL with an anti-target  
 CC (AT) to allow the ligands to bind to the AT; (b) separating unbound  
 CC ligands; (c) contacting the unbound ligands with a selected target (T)  
 CC to allow binding of unbound ligands to (T) to form a (T)-bound ligand  
 CC complex (C); (d) separating (C) from ligands which do not bind (T); and  
 CC (e) identifying (T)-bound ligands on (C). The method can be used for  
 CC screening a ligand library, e.g., a library of peptides, polypeptides,  
 CC non-polypeptides or oligonucleotides. A ligand (I) identified by the  
 CC method can be used in a cleaning, therapeutic or personal care  
 CC application. The method is preferably useful for identifying peptide  
 CC useful in cleaning compositions, which involves contacting peptide  
 CC library with AT such as fabric, ceramic, glass, stainless steel or  
 CC plastic; separating unbound AT peptides; contacting unbound AT peptides  
 CC with a target which is a stain such as porphyrin derived stain, tannin  
 CC derived stain, carotenoid pigment derived stain, anthocyanin pigment  
 CC derived stain, soil-based derived stain, oil-based derived stain, and  
 CC human body stain, to allow unbound peptide to bind with the stain to form  
 CC stain-bound peptide complex and identifying the stain-bound peptide on  
 CC the stain-bound peptide complex. A selective targeting method for  
 CC screening a library of ligands that bind to a target may be used to  
 CC identify ligands that bind to a target under harsh conditions. The  
 CC selective targeting method may be used to screen and identify a ligand  
 CC useful for therapeutic intervention, e.g., a library of ligands may be  
 CC screened to identify a tumour-bound ligand. The selective targeting  
 CC method may be used to identify cell type specific surface molecules.  
 CC Preferred anti-targets include one or more different cell types, cells  
 CC in different states, or cells that do not display the surface molecule.  
 CC ABB05232 to ABB05346 represent phage-peptides ligands which are used in  
 CC the exemplification of the present invention.

 XX  
 XX Example 2; Column 129-130; 181pp; English.  
 PS  
 XX The present invention describes a method for constructing a recombinant  
 CC bovine adenovirus vector 3 (BAV3) vector having a heterologous sequence  
 CC inserted into an insertion site. The method comprises linking the  
 CC heterologous sequence to sequences which are substantially homologous to  
 CC BAV3 sequences surrounding the insertion site, to form an insertion  
 CC cassette. The BAV3 and expression systems can be used for insertion of  
 CC foreign sequences, for providing DNA control sequences, for diagnostic  
 CC transcriptional and translational regulatory sequences, for purposes  
 CC purposes to detect the presence of viral nucleic acids or proteins  
 CC encoded by these regions in a subject or biological sample, for  
 CC providing immunological polypeptides or their fragments, for vaccines,  
 CC and for gene therapy for the treatment of genetic diseases (e.g.,  
 CC haemophilia, thalassaemias, emphysema, Gaucher's disease, cystic  
 CC fibrosis, Duchenne muscular dystrophy, Duchenne's or Becker's  
 CC myopathy), cancers, viral diseases (e.g., AIDS, herpesvirus infection,  
 CC cytomegalovirus infection and papillomavirus infection), and  
 CC cardiovascular diseases. The present sequence represents a BAV3 amino  
 CC acid sequence which is used in the exemplification of the present  
 CC invention.

 PS Disclosure; Figure 8; 258pp; English.  
 XX  
 CC This invention describes a novel method for the diagnosis of a disease  
 CC caused by, or associated with, an RNA molecule that has a frameshift  
 CC mutation. The method is used to diagnose age-related diseases, especially  
 CC cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's  
 CC disease, Down's syndrome, myotonic dystrophy, Huntington's disease,  
 CC multiple sclerosis, alcoholic liver disease, diabetes mellitus type II  
 CC and many others listed) or susceptibility to these disorders. The method  
 CC allows a definitive diagnosis of Alzheimer's disease in living patients,  
 CC at an early stage. It is based on the observation that disease may be  
 CC caused by mutations in RNA rather than DNA. The invention describes the  
 CC use of neuronal system RNA molecules, specifically proteins including  
 CC beta-amyloid precursor protein (beta-APP), the microtubule associated  
 CC proteins Tau and Big Tau, ubiquitin B, apolipoprotein E, microtubule  
 CC associated protein 2 (MAP2), neurofilament-L, neurofilament-M,  
 CC neurofilament-F, presenilin 1, presenilin 2, glial fibrillary acidic

PT Targeting integration of retrotransposon or retrovirus into silent
PT chromatin by transforming a cell with modified integrase having a
PT coding sequence for a peptide portion that interacts with chromatin at
PT desired sites -
XX
XX
PS Disclosure; Column 20; 41pp; English.
XX
XX
CC The present sequence represents a mutated portion of an integrase. The
CC specification describes a method for targeting integration of
CC retrotransposon of Ty1-copia group to desired location on a chromosome.
CC The method uses a modified integrase in a retrotransposon, where the
CC modified integrase contains a coding sequence for a peptide portion
CC which specifically binds to protein bound to the chromosome or to
CC particular nucleic acid sequences on chromosome. The method is useful
CC for targeting integration of a retrotransposon of the Ty1-copia group to
CC a desired location on a chromosome, especially into silent chromatin.
CC The silent chromatin targeting of Ty5 is useful for tagging genes which
CC are affected by aging and for studying oncogenes.

PT Modified thrombopoietin molecule for use in pharmaceutical
PT compositions, has same activity of human thrombopoietin, but is
PT non-immunogenic or less immunogenic than other non-modified molecules
PT with same activity -
XX
XX
PS Disclosure; Page 12; 36pp; English.
XX
XX
CC The invention relates to a novel modified molecule having the biological
CC activity of human thrombopoietin (TPO) and being substantially
CC non-immunogenic or less immunogenic than any non-modified molecule having
CC the same biological activity when used in vivo. The invention also
CC discloses T-cell epitope peptides created from non-modified TPO, and
CC having potential MHC class II binding activity. The protein of the
CC invention has immunosuppressive and antiallergic activity. A peptide of
CC the invention is useful in the manufacture of TPO having substantially no
CC or less immunogenicity than any non-modified molecule with the same
CC biological activity when used in vivo. The protein is useful in
CC pharmaceutical compositions, and is suitable for therapeutic use, e.g.
CC allergies and autoimmune disease treatment. The sequences shown in
CC ABP81048 - ABP81172 represent the MHC class II binding peptides of the
CC invention.

 CC -!- FUNCTION: One of the primary rRNA binding proteins, it binds  
 CC directly to 16S rRNA where it nucleates assembly of the head  
 CC domain of the 30S subunit. Is located at the subunit interface  
 CC close to the decoding center, probably blocks exit of the E-site  
 CC rRNA (by similarity).  
 CC -!- SUBUNIT: Part of the 30S ribosomal subunit. Contacts proteins S9  
 CC and S11 (by similarity).  
 CC -!- SIMILARITY: BELONGS TO THE S7P FAMILY OF RIBOSOMAL PROTEINS.

 XX Composition useful for the modulation of blood cell proliferation in a  
 PT patient comprises a blood cell regulator selected from colostrinin, its  
 PT constituent peptide and/or analog -  
 XX  
 PS Claim 6; Page 25; 51pp; English.  
 XX  
 XX The invention relates to a composition which comprises a blood cell  
 CC regulator selected from colostrinin, its constituent peptide and/or  
 CC analogue. The invention is used for modulating the oxidative stress  
 CC level in a cell e.g. mammalian or human cell present in a cell culture,  
 CC tissue, organ, or organism; or for treating oxidative damage to the skin  
 CC of a patient e.g. animal or human; to modulate oxidative stress during/

CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidising species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

XX Modulation of blood cell proliferation in a patient involves use of  
 PT blood cell regulator selected from colostrinin, its constituent peptide  
 PT and/or analogue -

PS Claim 1; Page 34; 54pp; English.

XX The present sequence is that of a colostrinin constituent peptide  
 CC that is preferred for use as an immunological regulator and as a  
 CC blood cell regulator in claimed methods of the invention. It is  
 CC classified as having a beta-casein homologue precursor, and  
 CC corresponds to casein amino acids 74-83. Methods are claimed for:  
 CC inducing a cytokine in a cell by contact with an immunological  
 CC regulator, where the cell is present in a cell culture, a tissue,  
 CC an organ or an organism, and the cell is mammalian, including human;  
 CC modulating an immune response in a cell by contact with the

CC immunological regulator under conditions effective to induce a  
 CC cytokine; modulating an immune response in a patient by administering  
 CC an immunological regulator under conditions effective to induce a  
 CC cytokine, where the immunological regulator is administered topically  
 CC or as part of a dietary supplement, and where the immune response is  
 CC specific or non specific, an interferon response or an antibody  
 CC response; modulating blood cell proliferation by contacting blood  
 CC cells with a blood cell regulator, where the blood cells are present  
 CC in a cell culture or an organism, are mammalian or human, and where  
 CC the blood cells are increased in number or differentiated; and a  
 CC method for modulating blood cell proliferation in a patent. A  
 CC claimed cytokine-inducing composition comprises a pharmaceutical  
 CC carrier and an active agent such as the present peptide. Cytokines  
 CC induced by this peptide in human leucocyte cultures include  
 CC tumour necrosis factor-alpha and interleukin-10.

XX Promoting cell differentiation in a patient involves use of blood cell  
 PT regulator selected from colostrinin, its constituent peptide and/or  
 PT analog -

XX Claim 7; Page 21; 37pp; English.

XX The invention comprises a method for promoting cell differentiation (e.g.  
 CC neural cell differentiation). The method involves contacting cells with a  
 CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
 CC cells in morphology to form neural cells. Colostrinin is a proline-rich  
 CC polypeptide aggregate that is present in colostrum. The method of the  
 CC invention is useful for promoting the differentiation of cells and for

CC treating damaged neural cells in a patient. The present amino acid  
 CC sequence represents a specifically claimed colostrinin peptide used in  
 CC the method of the invention.

 DR Novel peptides isolated from colostrinin polypeptide, useful for  
 PT treating viral and bacterial infections, disorders of immune system and  
 PT central nervous system e.g., Alzheimer's disease, dementia, and as food  
 PT additive  
 PS Claim 1; Page 8; 16pp; English.  
 XX The invention relates to a peptide derived from colostrinin (a colostrum  
 CC protein known to be a cytokine inducer) substantially entirely consists  
 CC of the peptide sequences appearing as ABG32207-ABG32223. Also included  
 CC are a composition comprising two or more of the peptides in combination  
 CC with a carrier, a dietary supplement comprising an orally ingestible  
 CC combination of the peptide in combination with a carrier and an antibody  
 CC which binds to the peptide, and which is obtainable by using peptide as  
 CC an antigen. The peptide is useful as a medicament for treating chronic  
 CC disorders of central nervous system e.g., neurological disorders and/or  
 CC mental disorders such as psychosis and/or neurosis, dementia,  
 CC neurodegenerative disorders such as Alzheimer's disease, motor  
 CC neuron disease, chronic disorders of immune system, diseases  
 CC with bacterial and viral etiology, acquired immunological deficiencies,  
 CC chronic bacterial, viral infections. The peptide is also useful for  
 CC treating diseases characterised by presence of amyloid plaque. The  
 CC peptide is also useful as a dietary supplement for babies, small

CC children, adults who have been subjected to chemotherapy and/or  
 CC adults who have suffered from cachexia or weight loss due to chronic  
 CC disease. The peptide is also useful for treating senile dementia,  
 CC Parkinson's disease, emotional disturbances and depression. The peptides  
 CC may also be used as an auxiliary withdrawal treatment for drug addicts,  
 CC after a period of detoxification, and in persons dependent on stimulants.  
 CC The present sequence is a colostrinin derived peptide of the invention.

XX Beta-casein or fragments not showing mimicry with GLUT2 - used in  
PT food or pharmaceutical products for prevention of insulin dependent  
PT diabetes, particularly in early infancy  
XX Claim 5; Page 4; 34pp; English.  
XX This sequence represents an immunogenic peptide from the A2 variant of  
CC beta-casein found in both Bos taurus and Bos indicus. The peptide  
CC contains a motif (see AAW31288) corresponding to amino acids 63-68 of  
CC the A2 beta casein protein and is found to be capable of mimicking a  
CC fragment of the GLUT2 protein found in insulin producing cells of the  
CC pancreas. There is a known correlation between exposure to cow's milk and  
CC the development of insulin-dependent diabetes which could possibly be  
CC linked to this molecular mimicry. Dietary or pharmaceutical products  
CC derived from milk substantially free of non-human beta casein or  
CC containing modified beta-casein without this motif could be used in diets  
CC for the prevention of insulin dependent diabetes particularly during  
CC early infancy.

PT Preparation of whey protein hydrolysate containing bioactive peptides  
PT but does not have bitter flavor -  
XX  
PS Claim 19; Page 21; 32pp; English.  
XX  
XX Sequences AAV69535-Y69536 represent bioactive peptides which are  
CC components of whey protein hydrolysate. The invention relates to the  
CC preparation of whey protein hydrolysate containing such bioactive  
CC peptides by treating a whey protein containing substrate with one or more  
CC enzymes capable of hydrolysing whey proteins to produce the whey protein  
CC hydrolysate containing bioactive peptides, and terminating the hydrolysis  
CC before substantial production of unacceptable bitter flavours. The  
CC invention also encompasses a non bitter product produced by partial  
CC hydrolysis of a substrate containing whey proteins, where the product  
CC comprises bioactive peptides and has a degree of hydrolysis of the whey  
CC proteins of below 10%, a food product containing the non bitter product,  
CC any one or a combination of two or more of the bioactive peptides of the  
CC invention, and a method for reducing systolic blood pressure in a patient  
CC which comprises administering the non bitter product to the patient. The  
CC peptides, products and food products are useful in a method for the  
CC reduction of systolic blood pressure. The whey protein products are free  
CC from bitter flavours and contain bioactive peptides. The products of the  
CC process have high digestibility and good organoleptic properties. The  
CC products may have bland or slightly sweet taste and are free of soapy  
CC and/or brothy flavours.

XX
CC The sequences given in AAR53607-26 are peptides which have opioid
CC activity. These peptides are produced by hydrolysing lactoprotein
CC with neutral protease derived from alkali protease. The peptides and
CC their salts are useful as analgesics, hypnotics, gastrointestinal
CC hormone stimulating agents, electrolyte adsorption stimulating agents,
CC diarrhoea treating agents, etc. The peptide given in AAR53608 shows
CC lower opioid activity and is therefore expected to be used as processed
CC drug.

XX Novel mannin-binding lectin associated serine protease-2, MASP-2  
XX polypeptide, useful for treating patients deficient in MASP-2 such as  
XX inflammatory and infectious diseases -

XX Example 4; Page 13; 22pp; English.  
XX The invention describes a Mannan-binding lectin associated serine  
XX protease-2 (MASP-2) polypeptides (I) with a molecular mass of 52K or 20K.  
XX (I) and the encoding polynucleotide (III) are useful for treating  
XX patients deficient in MASP-2. A compound (II) able to specifically  
XX inhibit MASP-2 (especially MASP-2 antisense nucleic acid sequence which  
XX inhibits complexing of MBL and MASP-2), is useful for inhibiting the  
XX activity of MASP-2. (I) is useful for evaluating MASP-2 function, and for  
XX identifying other cellular gene products or compounds that can modulate  
XX the MBLectin response. (I) and (II) are useful as diagnostic or  
XX therapeutic agents for treating infectious or inflammatory diseases, for  
XX identifying compounds that modulate the expression or activity of MASP-2,  
XX and for producing antibodies which are useful in screening assays to  
XX measure the effect of a candidate compound on expression or localisation  
XX of MASP-2, and for inhibiting abnormal MASP-2 activity. (III) is useful  
XX as primers for the identification of gene mutations, allelic variations  
XX and regulatory defects in MASP-2 gene, and for generating anti-idiotypic  
XX antibodies. This is the amino acid sequence of a human mannin-binding  
XX lectin associated serine protease-2 (MASP-2) related peptide used in the  
XX design of primers for isolating DNA encoding MASP-2.

XX Use of a polypeptide comprising amino acid sequence derived from  
XX mannin-binding lectin associated serine protease-2 (MASP-2) for  
XX producing pharmaceutical composition, to treat bacterial, fungal, viral  
XX infections -

XX Example 4; Page 44; 76pp; English.  
XX The invention relates to use of a polypeptide derived from  
XX mannin-binding lectin (MBL) associated serine protease-2 (MASP-2) for  
XX producing a pharmaceutical composition. MASP-2 is a complement-  
XX fixing enzyme and involved in lectin pathway of complement activation.  
XX The pharmaceutical composition comprising MASP-2 is useful for  
XX treating infections caused by microbes such as fungus, Yeast,  
XX retrovirus (e.g. human immunodeficiency virus (HIV)), or pathogenic  
XX bacteria which are resistant to at least one antibiotic medicament or  
XX multiresistant. The polynucleotide encoding MASP-2 is useful for  
XX treating patients deficient in MASP-2. The invention also discloses  
XX MASP-2 assays which are useful for determination of MASP-2 activity or  
XX levels in patients suffering from e.g. infections, inflammatory disorders  
XX and spontaneous recurrent abortion. The pharmaceutical composition  
XX comprising MASP-2 inhibitor is useful for treating inflammatory  
XX disorders. The present sequence is human MASP-2 peptide used for  
XX producing PCR primer.

PT Use of neutralising antibody to human interleukin-5 - that does not  
block binding to receptor alpha chain, to treat e.g. asthma,  
allergic rhinitis or atopic dermatitisXX  
PS Example 3; Page 71; 116pp; English.XX  
CC This peptide comprises complementarity determining region 3 (CDR3)  
of the light chain sequence of Fab2 (see AAW42467), an anti-human  
interleukin-5 (hIL-5) Fab obtained by chain shuffling; CDR1 and  
CDR2 of Fab2 are derived from the light chain variable region  
(see AAW42452) of anti-hIL-5 murine monoclonal antibody 2B6. The  
invention provides antibodies, especially altered, chimeric and  
humanised antibodies which are characterised by hIL-5 specificity,  
neutralising activity and affinity for hIL-5. The antibodies are  
useful for treating hIL-5-mediated disorders such as asthma,  
allergic rhinitis and atopic dermatitis, and can also be used in  
the diagnosis of such conditions by measurement (e.g. by ELISA) of  
endogenous hIL-5 levels. Also provided are vectors and transformed  
host cells for expression of the novel antibodies.XX

XX New catalytic antibodies able to decompose cocaine, single-chain  
 PT analogues - used to treat cocaine overdose and addiction, required  
 PT in far smaller doses than antibodies that antagonise cocaine by  
 PT simply binding

XX Claim 10; Page 5; 147pp; English.

XX AAW39875-77 represent the sequences of the light chain complementarity  
 CC determining regions (CDRs) of a catalytic antibody which is capable of  
 CC degrading cocaine. A series of cocaine transition state analogues (TSAs)  
 CC were prepared and used to immunise mice for production of hybridomas.  
 CC Catalytic antibodies were identified by their capacity to release  
 CC 3H-benzoic acid from 3H-phenyl cocaine. These antibodies were found  
 CC to have CDRs of the present sequence. The antibodies reduce the  
 CC concentration of cocaine in a subject, and are used particularly for the  
 CC treatment of an overdose. They are also used for treating addiction (by  
 CC reducing the in vivo concentration that can be achieved).

PT Novel immunoglobulin molecules binding kinase insert domain-containing  
PT receptor with the same affinity as vascular endothelial growth factor,  
PT used to reduce tumour growthXX  
PS Claim 3; Page 50; 55pp; English.XX  
CC New immunoglobulin molecules are described that bind kinase insert  
CC domain-containing receptor (KDR) with a comparable affinity to human  
CC vascular endothelial growth factor (VEGF). The antibodies neutralise  
CC KDR activation. The immunoglobulin may be a multivalent single  
CC chain antibody, a monovalent single chain antibody, a diabody, a  
CC triabody, a humanised antibody or a chimerised antibody.  
CC The immunoglobulin molecules bind specifically to an  
CC extracellular domain of the KDR receptor with the same affinity as  
CC VEGF. Overexpression of VEGF has been implicated in a number of  
CC human tumour cell lines including glioblastoma multiforme,  
CC hemangioblastoma, central nervous system neoplasms and AIDS  
CC associated Kaposi's sarcoma. The antibodies therefore have  
CC applications in treating these conditions. This sequence encodes a  
CC preferred heavy chain complementary determining region of the  
CC immunoglobulins of the invention.XX

XX Cell receptor specific antibodies useful for treating e.g. arthritis, diabetes, multiple sclerosis and psoriasis -

PT Claim 1; Page 40; 81pp; English.

PS This sequence represents complementarity determining region 3 (CDR L3) of the light chain of murine anti-CD23 (FCERII) monoclonal antibody C11 (see also AAY32262). The invention provides altered antibodies, such as chimeric or humanised antibodies, which comprise sufficient of the amino acid sequences of C11 light and heavy chain CDRs (see AAY32254-59) to render them capable of binding to the CD23 type II molecule expressed on haematopoietic cells. The antibodies are used to block soluble CD23 formation for treatment of arthritis, lupus erythematosus, Hashimoto's thyroiditis, multiple sclerosis, diabetes, uveitis, dermatitis, psoriasis, urticaria, nephrotic syndrome, glomerulonephritis, inflammatory bowel disease, ulcerative colitis, Crohn's disease, Sjogren's syndrome, allergies, allergic asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, eczema, graft-versus-host disease, COPD, insulinitis, bronchitis (particularly chronic bronchitis) or diabetes (particularly type 1 diabetes), and B-cell malignancies (claimed). They are also useful for studying interactions between CD23 and various ligands and determining the binding agents.

XX Inhibiting growth of non-solid tumor cells useful to treat bone marrow tumors such as leukemias or multiple myeloma comprises treatment with an antagonist of a vascular endothelial growth factor receptor -

PT Claim 8; Page 15; 68pp; English.

PS The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VEGFR) in mammals particularly humans. The method involves treating the mammals with humanised VEGFR monoclonal antibodies (antagonists). Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is humanised antibody murine light chain hypervariable region (VL) CDR-3 used in the exemplification of the invention.

 XX Treating or controlling an angiogenic dependent condition (e.g. a  
 PT neoplasm, collagen-vascular or autoimmune disease) in mammal by  
 PT administering a combination of an antiangiogenic molecule and a  
 PT chemotherapeutic agent -  
 XX  
 PS Disclosure; Page 37; 42pp; English.  
 XX  
 CC The present sequence is that of complementarity determining region  
 CC 3 of the light chain variable region (see also AAB82702) of  
 CC IMC-1C11, a mouse-human chimeric antibody that has vascular  
 CC endothelial growth factor (VEGF) antagonist activity. The antibody,  
 CC or a fragment of it, can be used as an anti-angiogenic molecule,  
 CC together with a chemotherapeutic acid, for the treatment of an  
 CC angiogenic dependent condition in a mammal, especially a human.  
 CC The invention relates generally to a method of treating or  
 CC controlling an angiogenic dependent condition by administering an  
 CC anti-angiogenic molecule and a chemotherapeutic agent, to produce a  
 CC regression or arrest of the condition while minimising or  
 CC preventing significant toxicity of the chemotherapeutic agent.  
 CC The anti-angiogenic molecule inhibits or blocks the action of a  
 CC vascular endothelium survival factor such as VEGF or its receptor,  
 CC and is especially IMC-1C11. Conditions that can be treated include  
 CC a neoplasm, a collagen-vascular disease or an autoimmune disease,  
 CC especially a solid tumour, including breast carcinoma, lung  
 CC carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma,  
 CC ovarian carcinoma, neuroblastoma, central nervous system tumour,  
 CC neuroblastoma, glioblastoma multiforme or melanoma (all claimed).

XX CD154 binding molecule, in particular antibody to human CD154 for use

PT in treatment, prevention of autoimmune, inflammatory diseases,

PT atherosclerosis, Alzheimer's disease and prevention of transplant

PT rejection

XX Claim 2; Page 23; 37pp; English.

XX The present sequence is that of complementarity determining region

CC 3 (CDR3) of the light chain variable region (VL, see also AAB82890)

CC of mouse anti-human CD154 monoclonal antibody ABR1793. The invention

CC provides a CD154 binding molecule, in particular an antibody to

CC human CD154, in which the VH region has the CDR1, CDR2 and CDR3 of

CC ABR1793 VH and the VL region has the CDR1, CDR2 and CDR3 of ABR1793

CC VL. The CD154 binding molecule is especially a human antibody in

CC which the VH and VL domains are essentially those of ABR1793, with

CC constant regions from human heavy and light chains. The antibodies

CC are used to inhibit an immune response mediated by CD154-positive

CC cell interactions with CD40-positive cells, in the treatment and/or

CC prevention of diseases, disorders or conditions where CD154

CC modulation and/or interference with or inhibition of the CD154:CD40

CC interactions is therapeutically beneficial, prevention of

CC macrophage-associated inflammatory processes and in the treatment of

CC diseases where suppression of antibody responses to antigens is

CC desirable (claimed). The CD154 binding molecules are useful for

CC prevention of cell, tissue or organ graft rejection, in the prevention

CC and treatment of autoimmune or inflammatory diseases, atherosclerosis

CC or Alzheimer's disease, and also for inhibiting B cell proliferation

CC and differentiation, T cell responses, induction or modulation of T

CC or B cell tolerance or inhibition of the growth of tumour cells

CC expressing CD154 antigen. Such conditions include autoimmune and

CC non-autoimmune disorders, in particular, Addison's disease, Celiac

CC sprue, glomerulonephritis, Grave's disease, Hashimoto's thyroiditis,

CC haemolytic disease of the newborn, keratitis, multiple sclerosis,

CC polymyositis, psoriasis, rheumatic fever, rheumatoid arthritis,

CC sarcoidosis, syphilis, tuberculosis, ulcerative colitis,

CC HIV infection, leukaemia or lymphoma.

XX Human leukocyte antigen ligand database assembled by producing HLA

PT having loaded ligands, isolating and sequencing loaded ligands to

PT obtain HLA ligand data and populating database in computer system with  
 XX ligand data -  
 PS Disclosure; Fig 5; 118pp; English.  
 XX  
 XX The present invention describes a human leukocyte antigen (HLA)  
 CC (e.g. soluble HLA) ligand database assembled by a process which involves  
 CC providing a computer system capable of storing HLA data as a database,  
 CC producing HLA having ligands loaded on it, isolating the loaded ligands  
 CC from HLA, sequencing the loaded ligands to obtain HLA ligand data, and  
 CC populating the database with HLA ligand data. Also described:  
 CC (1) accessing HLA (e.g. sHLA) data stored in a database; and (2) a  
 CC computer system for HLA (e.g. sHLA) ligand database. The database is  
 CC populated with HLA ligand sequences, motifs, extended motifs, submotifs,  
 CC ligands unique to infected cells, tumour specific ligands, as well as a  
 CC collection of current and future developed HLA ligand sequences. The  
 CC database which contains endogenously bound and loaded ligands facilitates  
 CC searching of viral, bacterial, tumour or human protein sequences for  
 CC ligands likely to bind a particular HLA class I or class II protein. The  
 CC database allows the user to screen an unknown peptide sequence for  
 CC potential matches with sHLA ligand discrete sequences or sHLA ligand  
 CC motifs of sequences. Due to the completeness and concentration of sHLA  
 CC HLA ligands is found in the sHLA ligand database, and by comparison of  
 CC such ligands to each other and to the genomic sequence, better motifs are  
 CC also found in the sHLA ligand database. ABP55692 to ABP55912 represent  
 CC amino acid sequences used in the exemplification of the present  
 CC invention.

 DR  
 XX Producing soluble human leukocyte antigen (HLA) in cell pharm useful  
 PT for studies of peptide loading for characterizing human immune  
 PT responses involves using HLA allelic cDNA or genomic DNA as starting  
 PT material -  
 XX  
 XX Disclosure; Page 185; 300pp; English.  
 PS  
 XX The invention describes a method of producing soluble human leukocyte  
 CC antigen (HLA) molecules (sHLA) in cell pharm involving amplifying HLA  
 CC allelic DNA by PCR using a locus specific primer to produce truncated a  
 CC PCR product (PI), inserting PI into mammalian expression vector;  
 CC electroporating the plasmid into a host cell; inoculating the cell pharm  
 CC with the host cell such that cell pharm produces sHLA. A multimeric HLA  
 CC complex (I) is useful for testing functionality of peptide ligands bound  
 CC by at least two soluble HLA molecules. (I) can be tested for its ability  
 CC to serve as ligands for cytotoxic T lymphocytes (CTLs) and induce immune  
 CC responses in humans. (I) is useful for studying T cell responses to

pathological conditions such as viral infections and cancer, and for modulating the human immune system to induce tolerance in autoimmune diseases. The individual secreted major histocompatibility complex (MHC) molecules produced are useful for studies of peptide loading (i.e., in vaccine development) and to the development of diagnostics. With the secreted MHC molecules, naturally loaded peptides can be eluted from the MHC molecule and characterised. The secreted MHC molecules allow the assessment of structural and functional impact of HLA class I polymorphism. The molecules are also useful to generate ligands and hence ligand maps from the peptide pools extracted from series of distinct yet related class I HLA-B\*57 alleles; compare the different ligand maps to identify potentially shared elements; and characterise the elements identified to positively or negatively validate the occurrence of overlapping ligands. The truncated version of (MHC) can be produced in mammalian or insect/bacterial cells such that milligram or greater quantities of an individual class I or class II molecule can be obtained. This sequence represents a HLA (human leukocyte antigen) peptide ligand.

 PT avoiding the induction or aggravation of a neurological/mental disorder  
 PT comprising supplying milk which does not contain any histidine variant  
 PT  
 XX  
 XX Disclosure; Fig 1; 32pp; English.  
 PS  
 XX The invention comprises a novel method for providing nutrition (in the  
 CC form of milk) to a susceptible individual, while avoiding the induction  
 CC or aggravation of a neurological/mental disorder. The method of the  
 CC invention comprises supplying milk which does not contain beta-casein  
 CC His-67 variants (e.g. beta-casein proteins which possess a histidine  
 CC residue at position 67 instead of proline). The presence of histidine at  
 CC position 67 of the beta-casein protein allows the production of  
 CC beta-casomorphin-7 (BCM-7), which may induce or aggravate a neurological/  
 CC mental disorder. The method of the invention is useful for preventing an  
 CC autism spectral disorder, such as: autism; pervasive developmental  
 CC disorder; or Asperger's syndrome. The present peptide sequence represents  
 CC amino acids 59-67 of the His-67 variant beta-casein protein.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -!- FUNCTION: Thiol protease which is believed to participate in  
CC intracellular degradation and turnover of proteins. Has also been  
CC implicated in tumor invasion and metastasis.  
CC -!- CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity  
CC for peptide bonds. Preferentially cleaves -Arg-Arg-|-Xaa bonds in  
CC small molecule substrates (thus differing from cathepsin L). In  
CC addition to being an endopeptidase, shows peptidyl-dipeptidase  
CC activity, liberating C-terminal dipeptides.  
CC -!- SUBUNIT: Dimer of a heavy chain and a light chain cross-linked  
CC by a disulfide bond (By similarity).  
CC -!- SUBCELLULAR LOCATION: Lysosomal (By similarity).

XX  
CC Sequences AAB72246 - AAB72275 represent peptides derived from colostrinin,  
CC a proline rich polypeptide aggregate contained in colostrum. The  
CC peptides have immune response modulatory activity, and are capable of  
CC inducing cytokines. Colostrinin and its derived peptides are useful for  
CC inducing cytokine production, for modulating an immunological response  
CC and for inducing blood cell proliferation. The peptides are useful in the  
CC treatment of disorders of the central nervous system, neurological  
CC disorders, mental disorders, dementia, neurodegenerative diseases,  
CC Alzheimer's disease, motor neurone disease, psychosis, neurosis, chronic  
CC disorders of the immune system, bacterial and viral infections and  
CC acquired immunological deficiencies.

 XX Composition useful for the modulation of blood cell proliferation in a  
 PT patient comprises a blood cell regulator selected from colostrinin, its  
 PT constituent peptide and/or analog -  
 XX  
 XX Claim 6; Page 25; 51pp; English.  
 PS  
 XX The invention relates to a composition which comprises a blood cell  
 CC regulator selected from colostrinin, its constituent peptide and/or  
 CC analogue. The invention is used for modulating the oxidative stress  
 CC level in a cell e.g. mammalian or human cell present in a cell culture,  
 CC tissue, organ, or organism; or for treating oxidative damage to the skin  
 CC of a patient e.g. animal or human; to modulate oxidative stress during/

CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidising species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

XX PT Modulation of blood cell proliferation in a patient involves use of  
 PT blood cell regulator selected from colostrinin, its constituent peptide  
 PT and/or analogue

XX PS Claim 1; Page 34; 54pp; English.

XX CC The present sequence is that of a colostrinin constituent peptide  
 CC that is preferred for use as an immunological regulator and as a  
 CC blood cell regulator in claimed methods of the invention. It is  
 CC classified as having a beta-casein homologue precursor, and  
 CC corresponds to casein amino acids 84-92. Methods are claimed for:  
 CC inducing a cytokine in a cell by contact with an immunological  
 CC regulator, where the cell is present in a cell culture, a tissue,  
 CC an organ or an organism, and the cell is mammalian, including human;  
 CC modulating an immune response in a cell by contact with the

CC immunological regulator under conditions effective to induce a  
 CC cytokine; modulating an immune response in a patient by administering  
 CC an immunological regulator under conditions effective to induce a  
 CC cytokine, where the immunological regulator is administered topically  
 CC or as part of a dietary supplement, and where the immune response is  
 CC specific or non specific, an interferon response or an antibody  
 CC response; modulating blood cell proliferation by contacting blood  
 CC cells with a blood cell regulator, where the blood cells are present  
 CC in a cell culture or an organism, are mammalian or human, and where  
 CC the blood cells are increased in number or differentiated; and a  
 CC method for modulating blood cell proliferation in a patent. A  
 CC claimed cytokine-inducing composition comprises a pharmaceutical  
 CC carrier and an active agent such as the present peptide. Cytokines  
 CC induced by this peptide in human-leucocyte cultures include  
 CC interferon-gamma, tumour necrosis factor-alpha, interleukin-4 and  
 CC interleukin-10.

XX PT Promoting cell differentiation in a patient involves use of blood cell  
 PT regulator selected from colostrinin, its constituent peptide and/or  
 PT analog

XX PS Claim 7; Page 21; 37pp; English.

XX CC The invention comprises a method for promoting cell differentiation (e.g.  
 CC neural cell differentiation). The method involves contacting cells with a  
 CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
 CC cells in morphology to form neural cells. Colostrinin is a proline-rich  
 CC polypeptide aggregate that is present in colostrum. The method of the

CC invention is useful for promoting the differentiation of cells and for  
 CC treating damaged neural cells in a patient. The present amino acid  
 CC sequence represents a specifically claimed colostrinin peptide used in  
 CC the method of the invention.

 XX PT Preparation of whey protein hydrolysate containing bioactive peptides  
 PT but does not have bitter flavor -  
 XX PS Claim 19; Page 21; 32pp; English.

XX CC Sequences AAY69535-V69536 represent bioactive peptides which are  
 CC components of whey protein hydrolysate. The invention relates to the  
 CC preparation of whey protein hydrolysate containing such bioactive  
 CC peptides by treating a whey protein containing substrate with one or more  
 CC enzymes capable of hydrolysing whey proteins to produce the whey protein  
 CC hydrolysate containing bioactive peptides, and terminating the hydrolysis  
 CC before substantial production of unacceptable bitter flavours. The  
 CC invention also encompasses a non bitter product produced by partial  
 CC hydrolysis of a substrate containing whey proteins, where the product  
 CC comprises bioactive peptides and has a degree of hydrolysis of the whey  
 CC proteins of below 10%, a food product containing the non bitter product,  
 CC any one or a combination of two or more of the bioactive peptides of the  
 CC invention, and a method for reducing systolic blood pressure in a patient  
 CC which comprises administering the non bitter product to the patient. The  
 CC peptides, products and food products are useful in a method for the  
 CC reduction of systolic blood pressure. The whey protein products are free  
 CC from bitter flavours and contain bioactive peptides. The products of the  
 CC process have high digestibility and good organoleptic properties. The  
 CC products may have bland or slightly sweet taste and are free of soapy  
 CC and/or brothy flavours.

 XX PT New peptides containing phosphotyrosine that bind with high affinity to  
 PT STAT 4 or 6, used to identify modulators of binding between STAT and  
 PT its receptor, e.g. for treating autoimmune disease -  
 XX Claim 11; Page 40; 53pp; English.  
 XX The present invention describes peptides (A) that bind to STAT (signal  
 CC transducer and activator of transcription)-4 or -6 when they contain a  
 CC phosphorylated tyrosine residue. Peptides that bind to STAT6 include  
 CC sequence (I) and those that bind to STAT4 contain sequences (II) or  
 CC (III): YK 1X 2X 3 (I); YDP2 3 (II); GYDMPHVL (III); where X<sub>1</sub> = K, V,  
 CC R, I, M or a first non-natural amino acid (Z<sub>1</sub>); X<sub>2</sub> = P, A or S;  
 CC X<sub>3</sub> = W, Y, F, H, L or a second non-natural amino acid (Z<sub>2</sub>); (I) does  
 CC not include the sequence YKPF. Z<sub>3</sub> = Q, H, N or W. STAT4/6 are involved  
 CC in activation and differentiation of lymphocytes and in the transmission  
 CC of signals (generated by binding of cytokines to their receptors) to the  
 CC nucleus, so that modulation of these activities allows control over the  
 CC immune response. (A) are used to identify specific modulators of the  
 CC binding of STAT4 or 6 to their receptors. The modulators are used to  
 CC study mechanisms of signal transduction, for control of gene expression  
 CC for production of recombinant proteins and particularly as lead  
 CC compounds for developing drugs for treatment and prevention of  
 CC autoimmune diseases, allergy, asthma, anaphylaxis, atopic dermatitis,  
 CC multiple sclerosis, diabetes mellitus, rheumatoid arthritis or other  
 CC conditions involving cellular responses to growth factors, cytokines or  
 CC hormones. AAY45189 to AAY45201 represent specifically claimed examples of  
 CC (A).

 PS Claim 1; Page 8; 16pp; English.  
 XX  
 CC The invention relates to a peptide derived from colostrinin (a colostrum  
 CC protein known to be a cytokine inducer) substantially entirely consists  
 CC of the peptide sequences appearing as ABG32207-ABG32223. Also included  
 CC are a composition comprising two or more of the peptides in combination  
 CC with a carrier, a dietary supplement comprising an orally ingestible  
 CC combination of the peptide in combination with a carrier and an antibody  
 CC which binds to the peptide, and which is obtainable by using peptide as  
 CC an antigen. The peptide is useful as a medicament for treating chronic  
 CC disorders of central nervous system e.g., neurological disorders and/or  
 CC mental disorders such as psychosis and/or neurosis, dementia,  
 CC neurodegenerative disorders such as Alzheimer's disease, motor  
 CC neuron disease, chronic disorders of immune system, diseases  
 CC with bacterial and viral etiology, acquired immunological deficiencies,  
 CC chronic bacterial, viral infections. The peptide is also useful for  
 CC treating diseases characterised by presence of amyloid plaque. The  
 CC peptide is also useful as a dietary supplement for babies, small  
 CC children, adults who have been subjected to chemotherapy and/or  
 CC adults who have suffered from cachexia or weight loss due to chronic  
 CC disease. The peptide is also useful for treating senile dementia,  
 CC Parkinson's disease, emotional disturbances and depression. The peptides  
 CC may also be used as an auxiliary withdrawal treatment for drug addicts,  
 CC after a period of detoxification, and in persons dependent on stimulants.  
 CC The present sequence is a colostrinin derived peptide of the invention.

 PT Beadset for simultaneous detection of many analytes by flow  
 PT cytometry, e.g. for detecting antigens, antibodies, or nucleic acid

PT mutations  
 XX  
 PS Example; Page 56; 301pp; English.  
 XX  
 CC The present invention describes a beadset (A), able to detect many  
 CC analytes (I) in a single sample by flow cytometry (FC). (A) is produced  
 CC by: (i) providing many subsets of beads which, within each subset, are  
 CC homogeneous as regards at least 3 selected class parameters (C) but  
 CC sufficiently different in at least one C from beads in other subsets to  
 CC provide a profile of C values unique for each subset in FC; (ii)  
 CC coupling the beads in each subset with a reactant (R), specific for a  
 CC given (I) and (iii) mixing the subsets to form an (A) in which subsets  
 CC (and thus bound R) are identifiable in FC from the unique profile of C.  
 CC A method of flow cytometry analysis using (A) is used to detect a very  
 CC wide range of (I), e.g. microbial or viral antigens (particularly from  
 CC pathogens that cause venereal, pulmonary or gastrointestinal disease);  
 CC therapeutic or illicit drugs; antigens or antibodies associated with  
 CC particular pathological conditions (malignancy, allergy, autoimmune  
 CC disease, blood-borne viruses or cardiovascular disease); hormones,  
 CC including those indicative of pregnancy; enzymes; immunoglobulins (Ig),  
 CC particularly of different subclasses; Ig that form part of a  
 CC particular epitope (specifically an epitope of human immune deficiency  
 CC virus) or nucleic acids (particularly for detecting a wide variety of  
 CC mutations, e.g. those present in the ret proto-oncogene, the low density  
 CC lipoprotein receptor, the Duchenne muscular dystrophy, angiotensin p53,  
 CC and Rb genes. The process is particularly used for diagnosis of disease  
 CC and for genetic analysis. The present sequence represents a monoclonal  
 CC antibody MAB 384 epitope used in the exemplification of the present  
 CC invention.

 XX Identifying peptides that bind to the surface of bacterial spores by  
 PT biopanning phage-display library, useful as vaccines and diagnostic  
 PT agents  
 XX  
 XX Disclosure; Page 6; 23pp; English.  
 PS  
 XX The invention provides peptides that bind to the surface of bacterial  
 CC spores. These peptides are identified by biopanning a phage-display  
 CC library with the spores. The library is incubated with spores and any  
 CC phage-spore complexes formed recovered by centrifuging. They are washed  
 CC thoroughly, then phage eluted with buffer, the eluate neutralised and  
 CC eluted phage amplified. The procedure is repeated, for 3 or 4 rounds of  
 CC panning, then individual clones purified, amplified and genomic DNA  
 CC extracted for determination of peptide-encoding sequences. Peptides  
 CC encoded by these sequences are then tested for ability to bind to target  
 CC spores. The peptides are used for capture and identification of  
 CC bacterial spores, particularly of the genus Bacillus, particularly for  
 CC detecting pathogens, or otherwise harmful species, in the environment  
 CC (e.g. air, water or food) or in clinical samples. They are also used to  
 CC protect against disease-causing spores (e.g. by incorporation in  
 CC protective masks), and in vaccines to generate a protective antibody  
 CC response. The peptides-specific antibodies are useful as detection  
 CC reagents, e.g. in enzyme-linked immunosorbent assay. The peptides are  
 CC species specific, i.e. they can differentiate between the possible  
 CC biological warfare agent B. anthracis and related species, widely present  
 CC in the environment and likely to give rise to false positive results.

 XX Controlling fertility in female mammals - by immunisation against  
 PT uteroglobin, particularly for oral administration to wild animals  
 XX Example 3; Page 11; 40pp; English.  
 XX This peptide is based on inter-helical loop 3 of Uteroglobin.  
 CC It can be used to promote an immunocontraceptive response in female  
 CC mammals when coupled to a carrier protein. The antibodies raised  
 CC against the peptide and carrier protein bind Uteroglobin resulting in a  
 CC reduction of fertility. Antibodies raised can also be used for detection  
 CC and diagnostic purposes. Peptides AAW33802-W33806 can be used for oral  
 CC administration of viral vaccine vectors for contraceptive purposes in  
 CC e.g. rabbits.

 XX Beadset for simultaneous detection of many analytes by flow  
 PT cytometry, e.g. for detecting antigens, antibodies, or nucleic acid  
 PT mutations  
 XX

PS Example; Page 56; 301pp; English.

XX The present invention describes a beadset (A), able to detect many  
 CC analytes (I) in a single sample by flow cytometry (FC). (A) is produced  
 CC by: (i) providing many subsets of beads which, within each subset, are  
 CC homogeneous as regards at least 3 selected class parameters (C) but  
 CC sufficiently different in at least one C from beads in other subsets to  
 CC provide a profile of C values unique for each subset in FC; (ii)  
 CC coupling the beads in each subset with a reactant (R), specific for a  
 CC given (I) and (iii) mixing the subsets to form an (A) in which subsets  
 CC (and thus bound R) are identifiable in FC from the unique profile of C.  
 CC A method of flow cytometry analysis using (A) is used to detect a very  
 CC wide range of (I), e.g. microbial or viral antigens (particularly from  
 CC pathogens that cause venereal, pulmonary or gastrointestinal disease);  
 CC therapeutic or illicit drugs; antigens or antibodies associated with  
 CC particular pathological conditions (malignancy, allergy, autoimmune  
 CC disease, blood-borne viruses or cardiovascular disease); hormones,  
 CC including those indicative of pregnancy; enzymes; immunoglobulins (Ig),  
 CC particularly of different (sub)classes; Ig that form part of a  
 CC particular epitope (specifically an epitope of human immune deficiency  
 CC virus) or nucleic acids (particularly for detecting a wide variety of  
 CC mutations, e.g. those present in the rat proto-oncogene, the low density  
 CC lipoprotein receptor, the Duchenne muscular dystrophy, angiotensin p53,  
 CC and Rb genes. The process is particularly used for diagnosis of disease  
 CC and for genetic analysis. The present sequence represents a monoclonal  
 CC antibody MAB 384 epitope used in the exemplification of the present  
 CC invention.

 XX Disclosure; Page 4126; 4143pp; English.

PS The present invention relates to oligonucleotides (see AAL26793-AAL34659)  
 CC encoding polymorphic variants of proteins related to amylases, amyloid  
 CC proteins, angiotensin, apoptosis related proteins, cadherin, cyclin,  
 CC polymerase, oncogenes, histones, kinases, colony stimulating factors,  
 CC complement related proteins, cytochromes, kinesins, cytokines,  
 CC interferons, interleukins, G-protein coupled receptors and thioesterases.  
 CC The present sequence is a peptide encoded by one such oligonucleotide.  
 CC The oligonucleotides and the peptides encoded by them may be used in the  
 CC prevention, diagnosis and treatment of diseases associated with  
 CC inappropriate expression of the proteins listed above. Disorders that may  
 CC be prevented, diagnosed and/or treated include multifactorial diseases  
 CC with a genetic component, such as autoimmune diseases (e.g. rheumatoid  
 CC arthritis, multiple sclerosis, diabetes, systemic lupus erythematosus  
 CC and Grave's disease), inflammation, cancer (e.g. cancers of the bladder,  
 CC brain, breast, colon and kidney, leukaemia), diseases of the nervous  
 CC system and an infection of pathogenic organisms.

PT New nucleic acid encoding the cancer-associated polypeptide plu-1, for
PT diagnosis, treatment and prevention of cancer, especially of breast and
PT ovary -
XX
PS Example 2; Fig 12; 173pp; English.
XX
CC The invention relates to a human cancer-associated polypeptide plu-1.
CC The plu-1 polypeptide can be recombinantly expressed by standard
CC recombinant methodology. Detection of the plu-1 nucleic acid or the
CC polypeptide is used for the following: (i) diagnosis (including imaging)
CC and prognosis of, and determination of susceptibility to, cancer,
CC specifically ovarian or breast cancer; and ii) treating cancer (by
CC inducing an immune response against cancer cells, e.g. as a vaccine, or
CC by antisense inhibition). Antigens derived from the polypeptide are used
CC to generate activated cytotoxic T lymphocytes, or dendritic cells, for
CC subsequent return to the patient for treatment of cancer. The polypeptide
CC may also be used to identify inhibitors of plu-1 activity. Fragments of
CC the polypeptide, and antibodies raised against plu-1, are useful as assay
CC and imaging agents, also therapeutically (to induce an anti-idiotypic
CC response or where conjugated to cytotoxic agents). The plu-1 antigen is
CC expressed more commonly in breast tumors than some known tumor antigens.
CC Sequences AAY5320-629 represent predicted peptides from the plu-1
CC polypeptide which may bind to the human class I alleles B27, A2, A3 and
CC A11.

XX  
PT New immunogenic peptides with HLA binding motif, useful in treatment  
PT and diagnosis of cancers and viral diseases -

XX  
PS Claim 1; Page 77; 150pp; English.

XX  
CC AAY45390 to AAY48214 represent specifically claimed immunogenic peptides  
CC having a human major histocompatibility complex (MHC) Class I (also  
CC known as human leukocyte antigen (HLA)) binding motif. The immunogenic  
CC peptides can bind to a specific HLA allele (i.e. HLA-A subtypes  
CC HLA-A2.1, A1, A3.2 or A24.1 or HLA-B or C) and induce a cytotoxic T cell  
CC response against the antigen from which the peptide is derived.  
CC Cytotoxic T lymphocytes (CTLs) which destroy antigen-bearing cells are  
CC normally induced by an antigen in the form of a peptide fragment bound  
CC to a HLA molecule, rather than the intact foreign antigen itself, and  
CC are particularly important in tumour rejection and in fighting viral  
CC infections. The peptides are therefore useful therapeutically to treat  
CC or prevent viral infections and cancers in mammals (especially humans)  
CC e.g. prostate cancer, hepatitis B and C, AIDS, and renal carcinoma.  
CC They can be administered as vaccines to elicit an immune response in  
CC individuals susceptible or otherwise at risk of viral infection or  
CC cancer, or used to treat chronic or acute conditions. They are also  
CC useful diagnostically, and can be used to induce a cytotoxic T cell  
CC response, by contacting a cytotoxic T cell with the peptide e.g. to  
CC produce CTLs ex vivo for infusion back into a patient. The  
CC polynucleotides encoding the immunogenic peptides are also useful  
CC therapeutically and for immunisation as above.

XX Vaccine compositions comprising human immunodeficiency virus-1 (HIV-1)
XX peptide groups, useful for vaccinating against HIV-1 -
XX Claim 32; Page 141; 448pp; English.
XX
The present invention describes a composition (I) comprising a prepared
CC human immunodeficiency virus-1 (HIV-1) group comprising an amino acid
CC sequence selected from 51 defined amino acid sequences (ABL25347 to
CC ABP25397). (I) has virucide activity and can be used in vaccines. (I)
CC may be used for immunising subjects against HIV-1 infections. The use of
CC group-based vaccines has several advantages over traditional vaccines,
CC particularly when compared to the use of whole antigens in vaccine
CC compositions. There is evidence that the immune response to whole
CC antigens is directed largely toward variable regions of the antigen,
CC allowing for immune escape due to mutations. The groups for inclusion in
CC an group-based vaccine may be selected from conserved regions of viral or
CC tumour-associated antigens, which therefore reduces the likelihood of
CC escape mutants. Furthermore, immunosuppressive groups that may be present
CC in whole antigens can be avoided with the use of group-based vaccines.
CC An additional advantage of an group-based vaccine approach is the ability
CC to combine selected groups (CTL and HTL), and further, to modify the
CC composition of the groups, achieving, for example, enhanced
CC immunogenicity. Accordingly, the immune response can be modulated, as
CC appropriate, for the target disease. Similar engineering of the response
CC is not possible with traditional approaches. ABP11501 to ABP25412
CC represent peptide sequences used in the exemplification of the present
CC invention.

 CC The present invention describes a composition (I) comprising a prepared  
 CC human immunodeficiency virus-1 (HIV-1) group comprising an amino acid  
 CC sequence selected from 51 defined amino acid sequences (ABL25347 to  
 CC ABP25397). (I) has virucide activity and can be used in vaccines. (I)  
 CC may be used for immunising subjects against HIV-1 infections. The use of  
 CC group-based vaccines has several advantages over traditional vaccines,  
 CC particularly when compared to the use of whole antigens in vaccine  
 CC compositions. There is evidence that the immune response to whole  
 CC antigens is directed largely toward variable regions of the antigen,  
 CC allowing for immune escape due to mutations. The groups for inclusion in  
 CC an group-based vaccine may be selected from conserved regions of viral or  
 CC tumour-associated antigens, which therefore reduces the likelihood of  
 CC escape mutants. Furthermore, immunosuppressive groups that may be present  
 CC in whole antigens can be avoided with the use of group-based vaccines.  
 CC An additional advantage of an group-based vaccine approach is the ability  
 CC to combine selected groups (CTL and HTL), and further, to modify the  
 CC composition of the groups, achieving, for example, enhanced  
 CC immunogenicity. Accordingly, the immune response can be modulated, as  
 CC appropriate, for the target disease. Similar engineering of the response  
 CC is not possible with traditional approaches. ABP11501 to ABP25412  
 CC represent peptide sequences used in the exemplification of the present  
 CC invention.

XX PT Novel mimotope of Neisseria meningitidis surface, for treating meningococcal disease, comprising a peptide epitope obtainable by screening peptide library with a specific monoclonal antibody -

XX PS Claim 3; Page 41; 55pp; English.

XX CC The present invention describes mimotopes (I) of a surface L3, 7, 9, of meningococcal lipopolysaccharides (LOS) of Neisseria meningitidis comprising a peptide epitope obtained by screening a peptide library with a monoclonal antibody (MAB) like 4B212C10, H44/24, H44/58, H44/70 or H44/78. (I) is antigenically cross-reactive with MAB. (I) have antibacterial and antiinflammatory activities, and can be used in vaccines. MAB is useful in the identification of (I). (I) or MAB are useful as a medicament, and also in the manufacture of a medicament for treating or preventing meningococcal disease. (I) and MAB are useful for treating a patient suffering from or susceptible to meningococcal disease by administering (I) or MAB to the patient. (I) is useful in a diagnostic assay for meningococcal infection to detect antibodies against L3, 7, 9, LOS and to detect the presence of L3, 7, 9 immunotype meningococcus in a sample from a patient. ABN88464 to ABN88487 and ABP47336 to ABP47754 represent sequences used in the exemplification of the present invention.

 XX New composition comprising a substance that modulates the status of  
 PT

PT 121P2A3 polypeptides, useful for eliciting humoral or cellular immune responses or in assessing the status of 121P2A3 gene products in normal versus cancerous tissues -

PS Claim 13; Page 129; 362pp; English.

XX The invention relates to a novel composition comprising a substance that modulates the status of a protein, 121P2A3. The composition of the invention has cytostatic and immunostimulant activity, and is useful as a vaccine. The 121P2A3 proteins and polynucleotides are useful for eliciting humoral or cellular immune response. The polynucleotides are useful for characterising cytogenetic abnormalities of this chromosomal locus, as tools that can be used to delineate cytogenetic abnormalities in the chromosomal region that encodes 121P2A3 that may contribute to malignant phenotype, and in assessing the status of 121P2A3 gene products in normal versus cancerous tissues. The proteins are useful for generating and characterising domain-specific antibodies, for identifying agents or cellular factors that bind to 121P2A3 or a particular structure domain, and in various therapeutic and diagnostic contexts, including cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABP83646 - ABP95595 represent peptides from the 121P2A3 variants of the invention.

XX New composition comprising a substance that modulates the status of

PT 121P2A3 polypeptides, useful for eliciting humoral or cellular immune

PT responses or in assessing the status of 121P2A3 gene products in normal

PT versus cancerous tissues -

XX Claim 13; Page 141; 362pp; English.

XX The invention relates to a novel composition comprising a substance that

CC modulates the status of a protein, 121P2A3. The composition of the

CC invention has cytostatic and immunostimulant activity, and is useful as a

CC vaccine. The 121P2A3 proteins and polynucleotides are useful for  
 CC eliciting humoral or cellular immune response. The polynucleotides are  
 CC useful for characterising cytogenetic abnormalities of this chromosomal  
 CC locus, as tools that can be used to delineate cytogenetic abnormalities  
 CC in the chromosomal region that encodes 121P2A3 that may contribute to  
 CC malignant phenotype, and in assessing the status of 121P2A3 gene  
 CC products in normal versus cancerous tissues. The proteins are useful  
 CC for generating and characterising domain-specific antibodies, for  
 CC identifying agents or cellular factors that bind to 121P2A3 or a  
 CC particular structure domain, and in various therapeutic and diagnostic  
 CC contexts, including cancer vaccines. The antibodies or T cells reactive  
 CC with the product are useful in passive or active immunisation, and in  
 CC imaging methodologies for the management of cancer. The sequences shown  
 CC in ABP83646 - ABP95595 represent peptides from the 121P2A3 variants of  
 CC the invention.

 XX  
 CC The invention relates to a novel composition comprising a substance that  
 CC modulates the status of a protein, 121P2A3. The composition of the  
 CC invention has cytostatic and immunostimulant activity, and is useful as a  
 CC vaccine. The 121P2A3 proteins and polynucleotides are useful for  
 CC eliciting humoral or cellular immune response. The polynucleotides are  
 CC useful for characterising cytogenetic abnormalities of this chromosomal  
 CC locus, as tools that can be used to delineate cytogenetic abnormalities  
 CC in the chromosomal region that encodes 121P2A3 that may contribute to  
 CC malignant phenotype, and in assessing the status of 121P2A3 gene  
 CC products in normal versus cancerous tissues. The proteins are useful  
 CC for generating and characterising domain-specific antibodies, for  
 CC identifying agents or cellular factors that bind to 121P2A3 or a  
 CC particular structure domain, and in various therapeutic and diagnostic  
 CC contexts, including cancer vaccines. The antibodies or T cells reactive

 DR New composition comprising a substance that modulates the status of  
 XX 121P2A3 polypeptides, useful for eliciting humoral or cellular immune  
 PT responses or in assessing the status of 121P2A3 gene products in normal  
 PT versus cancerous tissues -  
 XX Claim 13; Page 183; 362pp; English.  
 PS The invention relates to a novel composition comprising a substance that  
 XX modulates the status of a protein, 121P2A3. The composition of the  
 CC invention has cytostatic and immunostimulant activity, and is useful as a  
 CC vaccine. The 121P2A3 proteins and polynucleotides are useful for  
 CC eliciting humoral or cellular immune response. The polynucleotides are  
 CC useful for characterising cytogenetic abnormalities of this chromosomal  
 CC locus, as tools that can be used to delineate cytogenetic abnormalities  
 CC in the chromosomal region that encodes 121P2A3 that may contribute to  
 CC malignant phenotype, and in assessing the status of 121P2A3 gene  
 CC products in normal versus cancerous tissues. The proteins are useful  
 CC for generating and characterising domain-specific antibodies, for  
 CC identifying agents or cellular factors that bind to 121P2A3 or a  
 CC particular structure domain, and in various therapeutic and diagnostic  
 CC contexts, including cancer vaccines. The antibodies or T cells reactive  
 CC with the product are useful in passive or active immunisation, and in  
 CC imaging methodologies for the management of cancer. The sequences shown  
 CC in ABP83646 - ABP95595 represent peptides from the 121P2A3 variants of  
 CC the invention.

 XX PT New composition comprising a substance that modulates the status of  
 PT 121P2A3 polypeptides, useful for eliciting humoral or cellular immune  
 PT responses or in assessing the status of 121P2A3 gene products in normal  
 PT versus cancerous tissues -  
 XX Claim 13; Page 192; 362pp; English.

CC The invention relates to a novel composition comprising a substance that  
 CC modulates the status of a protein, 121P2A3. The composition of the  
 CC invention has cytostatic and immunostimulant activity, and is useful as a  
 CC vaccine. The 121P2A3 proteins and polynucleotides are useful for  
 CC eliciting humoral or cellular immune response. The polynucleotides are  
 CC useful for characterising cytogenetic abnormalities of this chromosomal  
 CC locus, as tools that can be used to delineate cytogenetic abnormalities  
 CC in the chromosomal region that encodes 121P2A3 that may contribute to  
 CC malignant phenotype, and in assessing the status of 121P2A3 gene  
 CC products in normal versus cancerous tissues. The proteins are useful  
 CC for generating and characterising domain-specific antibodies, for  
 CC identifying agents or cellular factors that bind to 121P2A3 or a  
 CC particular structure domain, and in various therapeutic and diagnostic  
 CC contexts, including cancer vaccines. The antibodies or T cells reactive

CC with the product are useful in passive or active immunisation, and in  
 CC imaging methodologies for the management of cancer. The sequences shown  
 CC in ABP83646 - ABP95595 represent peptides from the 121P2A3 variants of  
 CC the invention.

 XX  
 XX The invention relates to a novel composition comprising a substance that  
 CC modulates the status of a protein, 121P2A3. The composition of the  
 CC invention has cytostatic and immunostimulant activity, and is useful as a  
 CC vaccine. The 121P2A3 proteins and polynucleotides are useful for  
 CC eliciting humoral or cellular immune response. The polynucleotides are  
 CC useful for characterising cytogenetic abnormalities of this chromosomal  
 CC locus, as tools that can be used to delineate cytogenetic abnormalities  
 CC in the chromosomal region that encodes 121P2A3 that may contribute to  
 CC malignant phenotype, and in assessing the status of 121P2A3 gene  
 CC products in normal versus cancerous tissues. The proteins are useful  
 CC for generating and characterising domain-specific antibodies, for  
 CC identifying agents or cellular factors that bind to 121P2A3 or a  
 CC particular structure domain, and in various therapeutic and diagnostic  
 CC contexts, including cancer vaccines. The antibodies or T cells reactive  
 CC with the product are useful in passive or active immunisation, and in  
 CC imaging methodologies for the management of cancer. The sequences shown  
 CC in ABP83646 - ABP95595 represent peptides from the 121P2A3 variants of  
 CC the invention.

XX Inducing a cytokine and modulating an immune response, useful for  
 PT treating central nervous system diseases and bacterial and viral  
 PT infections, comprises administering colostrinin as an immunological  
 PT regulator -

XX Claim 1; Page 34; 50pp; English.

XX Sequences AAB72246 - AAB72275 represent peptides derived from colostrinin,  
 CC a proline rich polypeptide aggregate contained in colostrum. The  
 CC peptides have immune response modulatory activity, and are capable of  
 CC inducing cytokines. Colostrinin and its derived peptides are useful for  
 CC inducing cytokine production, for modulating an immunological response  
 CC and for inducing blood cell proliferation. The peptides are useful in the  
 CC treatment of disorders of the central nervous system, neurological  
 CC disorders, mental disorders, dementia, neurodegenerative diseases,  
 CC Alzheimer's disease, motor neuron disease, psychosis, neurosis, chronic  
 CC disorders of the immune system, bacterial and viral infections and  
 CC acquired immunological deficiencies.

XX Modulating oxidative stress level in a cell, involves contacting the  
 PT cell with an oxidative stress regulator selected from colostrinin, its  
 PT constituent peptide, analog or their combinations -

XX Claim 6; Page 25; 48pp; English.

XX The present invention relates to a method for modulating the oxidative  
 CC stress level in a cell or a patient, comprising contacting the cell with,  
 CC or administering to the patient, an oxidative stress regulator selected  
 CC from colostrinin, or its constituent peptide (e.g. the present peptide),  
 CC to change the level of an oxidising species in the cell. The method can  
 CC be used to treat oxidative damage to skin, by decreasing or preventing an  
 CC increase in the level of damage to a biomolecule of the patient.

XX Composition useful for the modulation of blood cell proliferation in a
XX patient comprises a blood cell regulator selected from colostrinin, its
XX constituent peptide and/or analog -
XX Claim 6; Page 25; 51pp; English.
XX The invention relates to a composition which comprises a blood cell
XX regulator selected from colostrinin, its constituent peptide and/or
XX analogue. The invention is used for modulating the oxidative stress
XX level in a cell e.g. mammalian or human cell present in a cell culture,
XX tissue, organ, or organism; or for treating oxidative damage to the skin
XX of a patient e.g. animal or human; to modulate oxidative stress during/

```

CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidising species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

XX Modulation of blood cell proliferation in a patient involves use of  
 PT blood cell regulator selected from colostrinin, its constituent peptide  
 PT and/or analogue

XX Claim 1; Page 34; 54pp; English.

XX The present sequence is that of a colostrinin constituent peptide  
 CC that is preferred for use as an immunological regulator and as a  
 CC blood cell regulator in claimed methods of the invention. It is  
 CC classified as having a beta-casein homologue precursor, and  
 CC corresponds to casein amino acids 93-102. Methods are claimed for:  
 CC inducing a cytokine in a cell by contact with an immunological  
 CC regulator, where the cell is present in a cell culture, a tissue,  
 CC an organ or an organism, and the cell is mammalian, including human;  
 CC modulating an immune response in a cell by contact with the

CC immunological regulator under conditions effective to induce a  
 CC cytokine; modulating an immune response in a patient by administering  
 CC an immunological regulator under conditions effective to induce a  
 CC cytokine, where the immunological regulator is administered topically  
 CC or as part of a dietary supplement, and where the immune response is  
 CC specific or non specific, an interferon response or an antibody  
 CC response; modulating blood cell proliferation by contacting blood  
 CC cells with a blood cell regulator, where the blood cells are present  
 CC in a cell culture or an organism, are mammalian or human, and where  
 CC the blood cells are increased in number or differentiated; and a  
 CC method for modulating blood cell proliferation in a patent. A  
 CC claimed cytokine-inducing composition comprises a pharmaceutical  
 CC carrier and an active agent such as the present peptide. Cytokines  
 CC induced by this peptide in human leucocyte cultures include  
 CC interferon-gamma, tumour necrosis factor-alpha and interleukin-10.

XX Promoting cell differentiation in a patient involves use of blood cell  
 PT regulator selected from colostrinin, its constituent peptide and/or  
 PT analog

XX Claim 7; Page 21; 37pp; English.

XX The invention comprises a method for promoting cell differentiation (e.g.  
 CC neural cell differentiation). The method involves contacting cells with a  
 CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
 CC cells in morphology to form neural cells. Colostrinin is a proline-rich  
 CC polypeptide aggregate that is present in colostrum. The method of the  
 CC invention is useful for promoting the differentiation of cells and for

CC treating damaged neural cells in a patient. The present amino acid  
 CC sequence represents a specifically claimed colostrinin peptide used in  
 CC the method of the invention.

XX Peptide useful as an inter alia in the treatment of e.g. disorders of  
 PT the immune system and the central nervous system comprises ten  
 PT amino-terminal amino acid sequence derived from peptides present in  
 PT colostrinin -

XX Claim 1; Page 15; 40pp; English.

XX The invention relates to colostrinin peptide fragments which are useful,  
 CC inter alia, in the treatment of chronic disorders of the immune system  
 CC and the central nervous system. Colostrinin peptides are used as a  
 CC medicament in the treatment of neurological disorders e.g., dementia,  
 CC neurodegenerative disorders e.g., Alzheimer's disease, motor neuron  
 CC disease e.g., Parkinson's disease, mental disorders e.g. psychosis and  
 CC neurosis, in acquired immunological deficiencies, chronic bacterial and  
 CC viral infections and diseases characterised by the presence of beta-  
 CC amyloid plaques and as a dietary supplement for babies, small children,  
 CC adults and senile persons, who have been subjected to chemotherapy or  
 CC have suffered from cachexia or weight loss due to the chronic disease.  
 CC Colostrinin peptides are also used as food additives and as an auxiliary  
 CC withdrawal treatment for drug addicts, after a period of detoxification  
 CC and in persons dependent on stimulants. Colostrinin peptides are used to  
 CC prepare antibodies and to treat emotional disturbances, e.g. emotional  
 CC disturbances of psychiatric patients in a state of depression. These  
 CC colostrinin peptides improves the development of immune system in a new  
 CC born child and to correct the immunological deficiencies in a child.  
 CC The present sequence is colostrinin peptide 9 related to the invention.  
 CC Colostrinin peptide 9 corresponds to position 97-105 of beta-caesin.

 Georgiades JA;  
 WPI; 2001-488775/53.  
 Peptide useful as an inter alia in the treatment of e.g. disorders of  
 the immune system and the central nervous system comprises ten  
 amino-terminal amino acid sequence derived from peptides present in  
 colostrinin -  
 Example 2; Page 9; 40pp; English.  
 The invention relates to colostrinin peptide fragments which are useful,  
 inter alia, in the treatment of chronic disorders of the immune system  
 and the central nervous system. Colostrinin peptides are used as a  
 medicament in the treatment of neurological disorders e.g., dementia,  
 neurodegenerative disorders e.g., Alzheimer's disease, motor neuron  
 disease e.g., Parkinson's disease, mental disorders e.g., psychosis and  
 neurosis, in acquired immunological deficiencies, chronic bacterial and  
 viral infections and diseases characterised by the presence of beta-  
 amyloid plaques and as a dietary supplement for babies, small children,  
 adults and senile persons, who have been subjected to chemotherapy or  
 have suffered from cachexia or weight loss due to the chronic disease.  
 Colostrinin peptides are also used as food additives and as an auxiliary  
 withdrawal treatment for drug addicts, after a period of detoxification  
 and in persons dependent on stimulants. Colostrinin peptides are used to  
 prepare antibodies and to treat emotional disturbances, e.g. emotional  
 disturbances of psychiatric patients in a state of depression. These  
 colostrinin peptides improves the development of immune system in a new  
 born child and to correct the immunological deficiencies in a child.  
 The present sequence is modified colostrinin cyclic peptide #9 related to  
 the invention.

PT Novel peptides isolated from colostrinin polypeptide, useful for  
PT treating viral and bacterial infections, disorders of immune system and  
PT central nervous system e.g., Alzheimer's disease, dementia, and as food  
PT additive -  
XX  
PS Claim 1; Page 8; 16pp; English.  
XX  
CC The invention relates to a peptide derived from colostrinin (a colostrum  
CC protein known to be a cytokine inducer) substantially entirely consists  
CC of the peptide sequences appearing as ABG32207-ABG32223. Also included  
CC are a composition comprising two or more of the peptides in combination  
CC with a carrier, a dietary supplement comprising an orally ingestible  
CC combination of the peptide in combination with a carrier and an antibody  
CC which binds to the peptide, and which is obtainable by using peptide as  
CC an antigen. The peptide is useful as a medicament for treating chronic  
CC disorders of central nervous system e.g., neurological disorders and/or  
CC mental disorders such as psychosis and/or neurosis, dementia,  
CC neurodegenerative disorders such as Alzheimer's disease, motor  
CC neuron disease, chronic disorders of immune system, diseases  
CC with bacterial and viral etiology, acquired immunological deficiencies,  
CC chronic bacterial, viral infections. The peptide is also useful for  
CC treating diseases characterised by presence of amyloid plaque. The  
CC peptide is also useful as a dietary supplement for babies, small  
CC children, adults who have been subjected to chemotherapy and/or  
CC adults who have suffered from cachexia or weight loss due to chronic  
CC disease. The peptide is also useful for treating senile dementia,  
CC Parkinson's disease, emotional disturbances and depression. The peptides  
CC may also be used as an auxiliary withdrawal treatment for drug addicts,  
CC after a period of detoxification, and in persons dependent on stimulants.  
CC The present sequence is a colostrinin derived peptide of the invention.

XX Benzyl:amide hydrochloride salt of anti-neoplastic penta:peptide -

PT can be produced without racemisation and in easily crystallisable form

XX Claim 5; Page 8; 8pp; German.

XX The salt Me2Val-Val-MeVal-Pro-Pro-NHbenzyl.HCl is prepared by one of the following methods:

CC (1). claimed intermediate II (AAR88260) is deprotected by removal of Z to give claimed intermediate III (AAR88261) which is methylated twice

CC and the product is hydrolysed to give intermediate (V) (AAR88266).

CC This cpd. is pref. converted to the claimed mixed anhydride VII

CC (AAR88262) before reaction with proline benzylamide and conversion to the hydrochloride salt; or

CC (2). intermediate II is hydrolysed to claimed intermediate IX

CC (AAR88263), which is pref. converted to the claimed mixed anhydride X (AAR88264) before reaction with proline benzylamide; then Z is removed, N-methyl introduced as above and product converted to hydrochloride. The free base form of the pentapeptide is known as an anti-neoplastic agent suitable for treatment of solid tumours, leukaemia, lymphoma and other neoplastic diseases. The benzylamide hydrochloride salt is easily crystallisable and can be produced in high yield without racemisation or the use of expensive or dangerous reagents.

CC The present sequence is that of intermediate XI.

XX PT New peptide derivatives of dolastatin 15 - useful for treating  
 PT neoplastic diseases, including both solid tumours and haematological  
 PT malignancies

XX PS Examples; Pages 32-59; 76pp; English.

XX CC New peptides are provided which are of general formula A-B-D-E-F-L,  
 CC where A, B, D, E and F are a broadly defined set of amino acid residues  
 CC and L (representing a modification of the C-terminal amino acid F) is  
 CC an alkyl, hydroxylamino or oxime residue. The peptides are dolastatin-15  
 CC derivatives which are used to treat neoplastic diseases. They can be  
 CC used to treat or inhibit solid tumours (e.g. tumours of the lung,  
 CC breast, colon, prostate, bladder, rectum or endometrium) or  
 CC haematological malignancies (e.g. leukaemias or lymphomas). The present  
 CC sequence is one of three specific sequences given in the patent for  
 CC which a large number of ester groups L are exemplified.

XX
XX Composition used for treating cancer - comprises paclitaxel,
PT taxotere or modified taxane or taxoid analogs and tetra- to hepta-
PT peptide(s)
XX
XX Example 1B; Page 38; 114pp; English.
XX
XX The invention relates to a composition for the treatment of cancer. The
CC composition comprises: (a) paclitaxel, taxotere or modified taxane or
CC taxoid analogs; (b) tetra- to hepta- peptides of formula
CC R1R2N-CH-CO-A-B-D-(E)s-(F)t-(G)u-K (I) or their salts and optionally (c)
CC a carrier. R1 = alkyl, cycloalkyl, alkylsulphonyl, fluoroalkyl or
CC aminosulphonyl; R2 = H, alkyl, fluoroalkyl, or cycloalkyl or NR1R2 =
CC pyrrolidino or piperidino; A = valyl, isoleucyl, leucyl, alioisoleucyl,
CC 2,2-dimethylglycyl, 2-cyclopropylglycyl, 2-cyclohexylglycyl,
CC 3-tert-butylalanyl, 2-tert-butylglycyl, 3-cyclohexylalanyl,
CC 2-ethylglycyl, 2-cyclohexylglycyl, norleucyl or norvalyl; B = an N-alkyl
CC derivative of A except alioisoleucyl or cyclohexylalanyl; D, E = prolyl,
CC homoprolyl, hydroxyprolyl, 3,4-dihydroxyprolyl, 4-fluoroprolyl, 3-, 4- or
CC 5- methylprolyl, azetidine-2-carbonyl, 3,3-dimethylprolyl,
CC 4,4-difluoroprolyl, oxazolidine-4-carbonyl, or thiazolidine-4-carbonyl;
CC F, G = prolyl, homoprolyl, hydroxyprolyl, thiazolidine-4-carbonyl,
CC 1-aminopentyl-1-carbonyl, valyl, 2-tert-butylglycyl, isoleucyl, leucyl,
CC 3-cyclohexylalanyl, phenylalanyl, N-methyl-phenylalanyl, 3-pyridylalanyl,
CC tetrahydroisoquinolyl-2-histidyl, 1-aminoinidyl-1-carbonyl,
CC 2-cyclohexylglycyl, norleucyl, norvalyl, neopentylglycyl, tryptophanyl,
CC glycyl, 2,2-dimethylglycyl, alanyl, beta-alanyl or 3-naphthylalanyl; X =
CC H, alkyl, cycloalkyl, methylcyclohexyl or arylalkyl; s, t, u = 0 or 1 and
CC K = hydroxy, alkoxy, phenoxy, benzyloxy or amino (optionally
CC substituted). The composition is used for treating lung, breast, colon,
CC prostate, bladder, rectal, endometrial and haematological cancers e.g.
CC leukaemias and lymphomas. The present sequence represents a specific
CC example of a peptide disclosed in the specification.

 PT disease and cancer -

XX PS Disclosure; Page 13; 44pp; German.

XX CC This invention describes novel amino acid or peptide derivatives or  
 CC analogues (I), containing a modified side-chain (e.g. containing a formyl  
 CC group) which are transglutaminase inhibitors and Factor XIII/XIIIa  
 CC inhibitors. The products of the invention have ophthalmological,  
 CC antiinflammatory, antirheumatic, antiarthritic, thrombolytic,  
 CC neuroprotective, nootropic, antiseborrheic, dermatological, cytostatic,  
 CC anti-HIV and antipsoriatic activity. (I) are transglutaminase inhibitors,  
 CC especially inhibitors of crosslinking of proteins or peptides  
 CC (specifically fibrin and/or alpha 2-plasmin inhibitor), incorporation of  
 CC primary amines in proteins and peptides, hydrolysis of the  
 CC gamma-carboxanido group of glutamine residues bound in proteins or  
 CC peptides, blood factor XIII/XIIIa and mammalian, human, tissue, liver,  
 CC brain, eye lens, keratinocyte, epidermal, prostate, plant, parasitic  
 CC and/or bacterial transglutaminases. The products of the invention can be  
 CC used for treating cataract, inflammatory diseases, rheumatoid arthritis,

CC chronic arthritis, thrombosis, Alzheimer's disease, Huntington's chorea,  
 CC acne, cancer (by induction of apoptosis), HIV infections and psoriasis.  
 CC (I) Are targeted and specific transglutaminase inhibitors, which can  
 CC inhibit a specific type of transglutaminase in the human or animal body  
 CC without affecting other transglutaminases. ABBB4001-ABBB4049 represent  
 CC transglutaminase inhibitors described in the method of the invention.

XX PT Prepn. of proline contg. tetra:peptide derivs. - comprises  
XX condensing tri:peptide with protected amino acid, deprotection, and  
XX N-di:methylation, useful as e.g. intermediates for dolastatin  
XX  
XX PS Example 4; Page 7; 8pp; German.  
XX  
XX CC This invention describes a method for the production of tetrapeptides  
XX which comprises reacting a tripeptide with an amino acid, removing Z and  
XX methylating the free amino group twice. R1-R4 = 1-6C alkyl; and Z =  
XX optional ring substituted benzoyloxycarbonyl. The products of the  
XX invention are intermediates for dolastatin 15 which have high  
XX antineoplastic activity. The peptides of the invention are active against  
XX solid tumours (of lung, breast, intestine, bladder, rectum, uterus and  
XX prostate), leukaemia, lymphoma and other neoplastic diseases. The  
XX peptides can now be produced from material available in large quantities,  
XX without racemisation and without requiring very expensive or hazardous  
XX reagents.

XX Prodn. of penta-peptide anti:neoplastic cpds. and dolastatin

PT precursor - from prolinamide by stepwise amino acid coupling and

PT optionally terminal enzymatic hydrolysis

XX Disclosure; Page 4; 10pp; German.

XX The patent relates to a new process for preparing pentapeptides

CC having -Pro-Pro at the C-terminal, starting from a prolinamide and

CC proceeding stepwise via a dipeptide, a tripeptide and a tetra-peptide,

CC optionally followed by hydrolysis of the C-terminal amide with a

CC prolyl endopeptidase. The preferred pentapeptide prepared is

CC Me2Val-Val-MeVal-Pro-Pro-OH (or its amide form) (see GENSESEQ AAW11169)

CC which is an antineoplastic compound and also an intermediate for

CC Dolastatin 15 and other peptides disclosed in WO9323424, for example

CC the present heptapeptide.

PS Example 189; Page 57; 114pp; English.

XX The invention relates to a composition for the treatment of cancer. The

CC composition comprises: (a) paclitaxel, taxotere or modified taxane or

CC taxoid analogs; (b) tetra- to hepta- peptides of formula

CC R1R2N-CHX-CO-A-B-D-(E)s-(F)-t-(G)u-K (I) or their salts and optionally (c)

CC a carrier. R1 = alkyl, cycloalkyl, alkylsulphonyl, fluoroalkyl or

CC aminosulphonyl; R2 = H, alkyl, fluoroalkyl, or cycloalkyl or NR1R2 =

CC pyrrolidino or piperidino; A = valyl, isoleucyl, leucyl, alloisoleucyl,

CC 2,2-dimethylglycyl, 2-cyclopropylglycyl, 2-cyclopentylglycyl,

CC 3-tert-butylalanyl, 2-tert-butylglycyl, 3-cyclohexylalanyl,

CC 2-ethylglycyl, 2-cyclohexylglycyl, norleucyl or norvalyl; B = an N-alkyl

CC derivative of A except alloisoleucyl or cyclohexylalanyl; D, E = prolyl,

CC homoprolyl, hydroxyprolyl, 3,4-dehydroprolyl, 4-fluoroprolyl, 3-, 4- or

CC 5-methylprolyl, azetidine-2-carboxyl, 3,3-dimethylprolyl,

CC 4,4-difluoroprolyl, oxazolidine-4-carboxyl, or thiazolidine-4-carboxyl;

CC F, G = prolyl, homoprolyl, hydroxyprolyl, thiazolidine-4-carboxyl,

CC 1-aminoprolyl-1-carboxyl, valyl, 2-tert-butylglycyl, isoleucyl, leucyl,

CC 3-cyclohexylalanyl, phenylalanyl, N-methyl-phenylalanyl, 3-pyridylalanyl,

CC tetrahydroisquinolyl-2-histidyl, 1-aminoindyl-1-carboxyl,

CC 2-cyclohexylglycyl, norleucyl, norvalyl, neopentylglycyl, tryptophanyl,

CC glycyl, 2,2-dimethylglycyl, alanyl, beta-alanyl or 3-naphthylalanyl; X =

CC H, alkyl, cycloalkyl, methylcyclohexyl or arylalkyl; s, t, u = 0 or 1 and

CC K = hydroxy, alkoxy, phenoxy, benzyloxy or amino (optionally

CC substituted). The composition is used for treating lung, breast, colon,

CC prostate, bladder, rectal, endometrial and haematological cancers e.g.

CC leukaemias and lymphomas. The present sequence represents a specific

CC example of a heptapeptide disclosed in the specification.

 XX Identifying peptides that are capable of binding to major  
 PT histocompatibility complex (MHC) molecules of a particular haplotype by  
 PT analyzing peptides bound to the soluble and secreted form of the MHC  
 PT molecules of the particular haplotype -  
 XX Claim 37; Page 65; 238pp; English.  
 XX The invention relates to a novel method for identifying peptides  
 CC originating from a particular cell type, which are capable of binding to  
 CC major histocompatibility complex (MHC) molecules of a particular  
 CC haplotype. The method comprises analysing peptides bound to the soluble  
 CC and secreted form of the MHC molecules of the particular haplotype. The  
 CC method is useful for identifying peptides for treating an autoimmune  
 CC disease, such as T or B cell and/or allergic disease or condition,  
 CC rheumatoid arthritis, or multiple sclerosis, neurodegenerative disorders,  
 CC e.g. Alzheimer's disease, or diseases associated with inflammation. The  
 CC sequences of the invention may be used in a gene therapy application.  
 CC This sequence represents a peptide relating to the method for identifying  
 CC MHC binding peptides of the invention.

XX XX  
XX This invention describes novel amino acid or peptide derivatives or  
CC analogues (I), containing a modified side-chain (e.g. containing a formyl  
CC group) which are transglutaminase inhibitors and Factor XIII/XIIIa  
CC inhibitors. The products of the invention have ophthalmological,  
CC antiinflammatory, antirheumatic, antiarthritic, thrombolytic,  
CC neuroprotective, neurotropic, antiseborrheic, dermatological, cytosolic,  
CC anti-HIV and antipsoriatic activity. (I) are transglutaminase inhibitors,  
CC especially inhibitors of crosslinking of proteins or peptides  
CC (specifically fibrin and/or alpha 2-plasmin inhibitor), incorporation of  
CC primary amines in proteins and peptides, hydrolysis of the  
CC gamma-carboxamide group of glutamine residues bound in proteins or  
CC peptides, blood factor XIII/XIIIa and mammalian, human, tissue, liver,  
CC brain, eye lens, keratinocyte, epidermal, prostate, plant, parasitic  
CC and/or bacterial transglutaminases. The products of the invention can be  
CC used for treating cataract, inflammatory diseases, rheumatoid arthritis,  
CC chronic arthritis, thrombosis, Alzheimer's disease, Huntington's chorea,  
CC acne, cancer (by induction of apoptosis), HIV infections and psoriasis.  
CC (I) Are targeted and specific transglutaminase inhibitors, which can  
CC inhibit a specific type of transglutaminase in the human or animal body  
CC without affecting other transglutaminases. ABB84001-ABB84049 represent  
CC transglutaminase inhibitors described in the method of the invention.

PS Disclosure; Page 3903; 4143pp; English.  
XX XX  
XX The present invention relates to oligonucleotides (see AAL26793-AAL34659)  
CC encoding polymorphic variants of proteins related to amylases, amyloid  
CC proteins, angiotensin, apoptosis related proteins, cadherin, cyclin,  
CC polymerase, oncogenes, histones, kinases, colony stimulating factors,  
CC complement related proteins, cytochromes, kinesins, cytokines,  
CC interferons, interleukins, G-protein coupled receptors and thioesterases.  
CC The present sequence is a peptide encoded by one such oligonucleotide.  
CC The oligonucleotides and the peptides encoded by them may be used in the  
CC prevention, diagnosis and treatment of diseases associated with  
CC inappropriate expression of the proteins listed above. Disorders that may  
CC be prevented, diagnosed and/or treated include multifactorial diseases  
CC with a genetic component, such as autoimmune diseases (e.g. rheumatoid  
CC arthritis, multiple sclerosis, diabetes, systemic lupus erythematosus  
CC and Grave's disease), inflammation, cancer (e.g. cancers of the bladder,  
CC brain, breast, colon and kidney, leukaemia), diseases of the nervous  
CC system and an infection of pathogenic organisms.

XX Kringle 4 region fragment derived from human plasminogen
XX
XX Example 1; Fig 5; 44pp; English.
XX
XX Angiostatin is a protein which has significant homology with a
XX fragment of murine plasminogen beginning at amino acid 98 of the
XX intact murine plasminogen molecule. Angiostatin comprises kringle
XX regions 1 to 4 of a plasminogen molecule. Angiogenesis can be
XX inhibited in an individual by administering a Kringle 4 region
XX cell inhibitor and reversibly inhibits the proliferation of these
XX cells. The mechanism by which the protein inhibits endothelial cell
XX growth remains uncharacterized. The method may be used to treat
XX diseases and disorders characterized by angiogenesis such as
XX arthritis, macular degeneration and/or diabetic retinopathy.
XX Three variants of the kringle 4 domain were found in murine
XX angiostatin due to variable cleavage sites between the kringle 3
XX and kringle 4 domains. See GENESEQ records AAB00054-B00057. This
XX sequence corresponds to amino acids 370-384 of angiostatin.

XX
XX Novel methods for the production of motif-specific, context-independent
XX antibodies using peptide libraries as antigens -
XX
XX Example 2; Fig 2A; 75pp; English.
XX
XX The present sequence represents a consensus site for MAPK
XX phosphorylation. The peptide was used to produce polyclonal antibodies
XX using the method of the invention. The specification describes methods
XX for the production of antibodies that selectively recognize short amino
XX acid motifs independent of the surrounding sequences. The method
XX comprises constructing a combinatorial peptide library comprising at
XX least one fixed amino acid and variable surrounding amino acids, and
XX immunizing a host with the peptide library. The methods allows the
XX production of antibodies that recognize single amino acids and motifs,
XX e.g. phosphorylated serine, threonine and tyrosine, or acetylated lysine,
XX as well as other unmodified or modified amino acids. The antibodies may
XX be used to identify an unknown substrate of an enzymes, e.g. to detect
XX new substrates in a variety of cascades which involve conserved
XX substrate motifs. The antibodies may also be used to identify an enzyme
XX which modifies a known substrate, e.g. to detect new proteins which act
XX on known classes of substrates. The antibodies may also be used in vitro
XX as reagents in high-throughput assays, e.g. drug screens, to detect the
XX enzymatic modification of certain substrates containing a conserved
XX motif. The antibodies may also be used for genome-wide profiling of
XX changes in protein phosphorylation e.g. as a result of drug treatment.
XX They may also be used to detect protein kinase or acetyltransferase
XX activity.

XX
XX Producing motif-specific, context-independent antibody recognizing
XX motif-containing proteins, using a degenerate peptide library having
XX target motifs with invariant amino acids flanked by degenerate amino
XX acids, as antigens -
XX
XX Example 2; Fig 2A; 86pp; English.
XX
XX The invention describes a method of producing a motif-specific,
XX context-independent antibody (I) that recognises several peptides or
XX proteins within the genome that contain motifs. The method is useful
XX for: (1) identifying an unknown substrate of an enzyme, which involves
XX generating at least one (I) which recognizes a motif common to several
XX substrate of the enzyme with a genome; (2) detecting the modification
XX state of a target substrate that contains a motif common to several
XX substrates of an enzyme within a genome; (3) screening a drug for the
XX inhibition or activation of enzyme activity on at least one substrate
XX that contains a motif common to several substrates of the enzyme within
XX a genome; (4) identifying an enzyme which modifies a known substrate
XX that contains a motif common to several substrates of the enzyme within
XX a genome; (5) profiling protein levels or post-translation modifications
XX in a cell or tissue on a genome wide scale; (6) profiling drug-induced
XX changes in protein levels or post-translation modifications in a cell or
XX tissue on a genome wide scale. The motif is selected from single
XX phosphothreonine, a single phosphoserine, a single phosphotyrosine, a
XX single acetyl-lysine, and a single nitrotyrosine, and comprises all or
XX part of kinase consensus substrate motif or a protein binding motif.
XX This is the amino acid sequence of a peptide used in the creation of
XX a motif-specific, context-independent antibody.

 XX Prepn. of proline contg. tetra:peptide derivs. - comprises  
 PT condensing tri:peptide with protected amino acid, deprotection, and  
 PT N-di:methylation, useful as e.g. intermediates for dolastatin  
 XX  
 XX Example 1; Page 4; 8pp; German.  
 XX  
 XX This invention describes a method for the production of tetrapeptides  
 CC which comprises reacting a tripeptide with an amino acid, removing Z and  
 CC methylating the free amino group twice. R1-R4 = 1-6C alkyl; and Z =  
 CC optional ring substituted benzyloxycarbonyl. The products of the  
 CC invention are intermediates for dolastatin 15 which have high  
 CC antineoplastic activity. The peptides of the invention are active against  
 CC solid tumours (of lung, breast, intestine, bladder, rectum, uterus and  
 CC prostate), leukaemia, lymphoma and other neoplastic diseases. The  
 CC peptides can now be produced from material available in large quantities,  
 CC without racemisation and without requiring very expensive or hazardous  
 CC reagents.

XX the following methods:
XX (1). claimed intermediate II (AAR88260) is deprotected by removal of Z
XX to give claimed intermediate III (AAR88261) which is methylated twice
XX and the product is hydrolysed to give intermediate (V) (AAR88266).
XX This cpd. is pref. converted to the claimed mixed anhydride VII
XX (AAR88262) before reaction with proline benzylamide and conversion to
XX the hydrochloride salt; or
XX (2). intermediate II is hydrolysed to claimed intermediate IX
XX (AAR88263), which is pref. converted to the claimed mixed anhydride
XX X (AAR88264) before reaction with proline benzylamide; then Z is
XX removed, N-methyl introduced as above and product converted to
XX hydrochloride. The free base form of the pentapeptide is known as an
XX anti-neoplastic agent suitable for treatment of solid tumours, leukaemia,
XX lymphoma and other neoplastic diseases. The benzylamide hydrochloride
XX salt is easily crystallisable and can be produced in high yield without
XX racemisation or the use of expensive or dangerous reagents.
XX The present sequence is that of intermediate VII.

 XX Composition used for treating cancer - comprises paclitaxel,  
 PT taxotere or modified taxane or taxoid analogs and tetra- to hepta-  
 PT peptide(s)  
 XX  
 XX Example 2A; Page 37; 114pp; English.  
 PS  
 XX The invention relates to a composition for the treatment of cancer. The  
 CC composition comprises: (a) paclitaxel, taxotere or modified taxane or  
 CC taxoid analogs; (b) tetra- to hepta- peptides of formula  
 CC R1R2N-CHX-CO-A-B-D-(E)-S-(Ft)-(G)U-K (I) or their salts and optionally (c)  
 CC a carrier. R1 = alkyl, cycloalkyl, alkylsulphonyl, fluoroalkyl or  
 CC aminoalkyl; R2 = H, alkyl, fluoroalkyl, or cycloalkyl or NR1R2 =  
 CC pyrrolidino or piperidino; A = valyl, isoleucyl, leucyl, alloisoleucyl,  
 CC 2,4-dimethylglycyl, 2-cyclopropylglycyl, 2-cyclopentylglycyl,  
 CC 3-tert-butylalanyl, 2-tert-butylglycyl, 3-cyclohexylalanyl,  
 CC 2-ethylglycyl, 2-cyclohexylglycyl, norleucyl or norvalyl; B = an N-alkyl  
 CC derivative of A except alloisoleucyl or cyclohexylalanyl; D, E = prolyl,  
 CC homoprolyl, hydroxyprolyl, 3,4-dehydroprolyl, 4-fluoroprolyl, 3-, 4- or  
 CC 5-methylprolyl, azetidine-2-carbonyl, 3,3-dimethylprolyl,  
 CC 4,4-difluoroprolyl, oxazolidine-4-carbonyl, or thiazolidine-4-carbonyl;  
 CC F, G = prolyl, homoprolyl, hydroxyprolyl, thiazolidine-4-carbonyl,  
 CC 1-aminopentyl-1-carbonyl, valyl, 2-tert-butylglycyl, isoleucyl, leucyl,  
 CC 3-cyclohexylalanyl, phenylalanyl, N-methyl-phenylalanyl, 3-pyridylalanyl,  
 CC tetrahydroisoquinolyl-2-histidyl, 1-aminoindolyl-1-carbonyl,

CC 2-cyclohexylglycyl, norleucyl, norvalyl, neopentylglycyl, tryptophanyl,  
 CC glycyl, 2,2-dimethylglycyl, alanyl, beta-alanyl or 3-naphthylalanyl; X =  
 CC H, alkyl, cycloalkyl, methoxycyclohexyl or arylalkyl; S, t, u = 0 or 1 and  
 CC K = hydroxy, alkoxy, phenoxy, benzyloxy or amino (optionally  
 CC substituted). The composition is used for treating lung, breast, colon,  
 CC prostate, bladder, rectal, endometrial and haematological cancers e.g.  
 CC leukaemias and lymphomas. The present sequence represents a specific  
 CC example of a tetrapeptide disclosed in the specification.

XX New penta- and hexapeptides, which are resistant to enzymatic  
 PT degradation, are used to inhibit or treat solid tumours e.g. of the  
 PT lung, colon, prostate, bladder and rectum, and leukaemias and lymphomas

XX Example 1; Page 5; 22pp; English.

XX The invention relates to novel antineoplastic peptides of formula (I):  
 CC (N(R1)(R2)-CHX-C(O)-A-B-D-E-(G)S-K. Where R1 = H, CH3 or C2H5;  
 CC R2 = CH3 or C2H5; or NR1R2 = pyrrolidine; A = valyl, isoleucyl, allo-  
 CC isoleucyl, 2-tert-butylglycyl, 2-ethylglycyl, norleucyl or norvalyl  
 CC residue; B = N-methyl-valyl, N-methyl-norvalyl, N-methyl-leucyl,  
 CC N-methyl-isoleucyl, N-methyl-2-tertbutylglycyl, N-methyl-2-ethylglycyl  
 CC or N-methyl-norleucyl; D = prolyl, homoprolyl, hydroxyprolyl or  
 CC thiazolidine-4-carboxyl residue; E = prolyl, homoprolyl, thiazolidine-4-  
 CC carbonyl, trans-4-fluoro-L-prolyl, cis-4-fluoro-L-prolyl, trans-4-chloro-  
 CC L-prolyl or cis-4-chloro-L-prolyl; X = C2H5, C3H7, C4H9, isopropyl, sec-

CC butyl, tert-butyl, cyclopropyl or cyclopentyl; G = L-2-tert-butylglycyl,  
 CC D-2-tert-butylglycyl, D-valyl, D-isoleucyl, D-leucyl, D-norvalyl,  
 CC 1-aminopentyl-1-carboxyl or 2,2-dimethylglycyl; s = 0 or 1; K' = NH-1-8C  
 CC alkyl, NH-3-8C alkanyl, -NH-3-8C alkanyl, -NH-6-8C cycloalkyl, -NH-4C  
 CC alkene-3-8C cycloalkyl, 1-4C alkyl-N-1-6C alkyl (one CH<sub>2</sub> group may be  
 CC replaced by O or S, one H by phenyl or CW, or mono, di or tri-H by F,  
 CC except for N-methoxy-N-methylamino, N-benzylamino or N-methyl-N-  
 CC benzylamino residue), morpholine, azetidine, thiazolidine, hexahydro-  
 CC pentalen-3a-ylamine, methyl-(4-methyl-tetrahydro-pyran-4-yl) amine,  
 CC 2,6-dimethyl-phenylamine, 1,2,3,4-tetrahydro-naphthalen-1-ylamine,  
 CC indan-1-ylamine, indan-2-ylamine, 1-methyl-cyclopropylamine,  
 CC 1-methyl-cyclobutylamine, 1-methyl-cyclopentylamine,  
 CC 1-methyl-cyclohexylamine, tetrahydro-furan-2-yl methylamine,  
 CC 2,3-dihydro-1H-isoindole, adamantan-1-yl amine, NH-C(CH<sub>3</sub>)<sub>2</sub>(CONH<sub>2</sub>) or  
 CC 9-fluorenylamine. The peptides are used to inhibit or otherwise treat  
 CC solid tumours (e.g. tumours of the lungs, breast, colon, prostate,  
 CC bladder, rectum or endometrial tumours) or haematological malignancies  
 CC (e.g. leukaemias, lymphomas). The peptide is resistant to enzymatic  
 CC degradation and can also be administered orally. The present sequence  
 CC represents antineoplastic peptide #2 used in an example of the invention.

XX	New dolastatin derivs. useful as antineoplastic agents - which exhibit improved resistance to enzymatic degradation	
XX	Examples 1, 2; Pages 18, 19; 47pp; English.	
XX	New dolastatin derivatives are disclosed having the formula	
CC	R1R2N-CHX-CO-A-B-D-E-(F)-K, in which: R1 = Me, Et or iPr; R2 = H, Me or Et; or NR1R2 = a pyrrolidine ring; A = a valyl, isoleucyl, leucyl, 2-tert-butylglycyl, 2-ethylglycyl, norleucyl or norvalyl residue;	
CC	B = a N-methyl-valyl, -leucyl, -isoleucyl, -norvalyl, -norleucyl, -2-tert-butylglycyl, -3-tert-butylalanyl or -2-ethylglycyl residue;	
CC	D = a prolyl, 3,4-dehydroprolyl, 4-fluoroprolyl, 4,4-difluoroprolyl, azetidine-2-carbonyl, homoprolyl, thiazolidine-4-carbonyl or 3-, 4- or 5-methylprolyl residue; E = a 3,4-dehydroprolyl, 4-fluoroprolyl, 3- or 4-methylprolyl, 4,4-difluoroprolyl or azetidine-2-carbonyl residue; F = a valyl, 2-tert-butylglycyl, isoleucyl, leucyl, 2-cyclohexylglycyl, norleucyl, norvalyl, neopentylglycyl, alanyl, beta-alanyl or aminoisobutyryl residue; X = alkyl (preferably 2-5C alkyl), cyclopropyl or cyclopentyl; t = 0 or 1; and K = alkoxy (preferably 1-4C alkoxy), benzyl or optionally substituted amino.	
CC	The peptides may be used to treat or inhibit tumours (including tumours of the lung, colon, breast, bladder, rectum or prostate) or haematological malignancies (such as lymphomas and leukaemias). They are more resistant to enzymatic degradation than dolastatin-15.	
CC	The present sequence represents two specific peptides which were prepared in the Examples of the patent.

XX	Composition used for treating cancer - comprises paclitaxel, taxotere or modified taxane or taxoid analogs and tetra- to hepta-peptide(s)	
XX	Example 105; Page 55; 114pp; English.	
XX	The invention relates to a composition for the treatment of cancer. The composition comprises: (a) paclitaxel, taxotere or modified taxane or taxoid analogs; (b) tetra- to hepta- peptides of formula R1R2N-CHX-CO-A-B-D-(E)-F)-t-(G)-K (I) or their salts and optionally a carrier. R1 = alkyl, cycloalkyl, alkylsulphonyl, fluoroalkyl or aminoalkyl; R2 = H, alkyl, fluoroalkyl, or cycloalkyl or NR1R2 = pyrrolidino or piperidino; A = valyl, isoleucyl, leucyl, alioisoleucyl, 2,2-dimethylglycyl, 2-cyclopropylglycyl, 2-cyclopentylglycyl, 3-tert-butylalanyl, 2-tert-butylglycyl, 3-cyclohexylalanyl, 2-ethylglycyl, 2-cyclohexylglycyl, norleucyl or norvalyl; B = an N-alkyl derivative of A except alioisoleucyl or cyclohexylalanyl; D, E = prolyl, homoprolyl, hydroxyprolyl, 3,4-dehydroprolyl, 4-fluoroprolyl, 3-, 4- or 5-methylprolyl, azetidine-2-carbonyl, 3,3-dimethylprolyl, 4,4-difluoroprolyl, oxazolidine-4-carbonyl, or thiazolidine-4-carbonyl; F, G = prolyl, homoprolyl, hydroxyprolyl, thiazolidine-4-carbonyl, 1-amino-2-ethyl-1-carbonyl, valyl, 2-tert-butylglycyl, isoleucyl, leucyl, 3-cyclohexylalanyl, phenylalanyl, N-methyl-phenylalanyl, 3-pyridylalanyl, tetrahydroisoquinolyl-2-histidyl, 1-aminoindyl-1-carbonyl, 2-cyclohexylglycyl, norleucyl, norvalyl, neopentylglycyl, tryptophanyl, glycyl, 2,2-dimethylglycyl, alanyl, beta-alanyl or 3-naphthylalanyl; X = H, alkyl, cycloalkyl, methylcyclohexyl or arylalkyl; s, t, u = 0 or 1 and K = hydroxy, alkoxy, phenoxy, benzyl or amino (optionally substituted). The composition is used for treating lung, breast, colon, prostate, bladder, rectal, endometrial and haematological cancers e.g. leukaemias and lymphomas. The present sequence represents a specific example of a peptide disclosed in the specification.

Production of tripeptides for treating hypertension and stress by
processing casein with proteinase and peptidase -
Claim 3; Page 26; 32pp; Japanese.
This invention relates to a method for the production of tripeptides. The
method comprises treating material containing milk casein with a
proteinase to produce intermediate peptide containing ValProPro or
IleProPro with no proline residue any where else in the peptide. Use of
the peptides may result in hypotensive and tranquiliser activity. The
peptide can be used in treatments to lower blood pressure and in the
treatment of stress. The present sequence represents an intermediate
peptide of the invention.

XX New GNA33 peptides that elicit production of antibodies exhibiting
PT complement-mediated bactericidal activity against a Neisseria
PT meningitidis serogroup B (MenB), useful for diagnosing or preventing
PT (as vaccine) MenB infection -
XX
PS Claim 2; Page 60; 70pp; English.
XX
XX The invention relates to novel genome derived antigen 33 (GNA33) peptides
CC which are capable of eliciting the production of antibodies that exhibit
CC complement-mediated bactericidal activity and/or opsonic activity against
CC a surface-exposed epitope on loop 4 of PorA of Neisseria meningitidis

```

CC serogroup B (MenB) Fl.2 serosubtype. GNA33 sequences are useful for  
CC eliciting an immune response against MenB bacterium in a mammalian  
CC subject. They are useful for detecting MenB antibodies in a biological  
CC sample. GNA33 sequences are useful to prevent or diagnose MenB bacterium  
CC infection. Sequences of the invention are used as vaccines. The present  
CC sequence is GNA33 peptide.
